**Unified Fields** Janine Rogers, 2014-12-01 Literary form presents an important opportunity for understanding the relationship between literature and science Through a series of close readings of poetry and prose Unified Fields demonstrates that formal structures in literature can relate to scientific concepts through their essential interpretive functions Janine Rogers engages with a wide range of writing from Canadian British and American authors including the poetry of Elizabeth Bishop and Robyn Sarah as well as prose by Margaret Atwood Ian McEwan and Stephen Hawking She employs an interdisciplinary approach combining formalist historical and theoretical literary practice informed by interpretive frameworks developed in the philosophy of science Although dedicated to contemporary texts Rogers's analysis is frequently rooted in historical contexts of form including Euclidean geometry and medieval romance developed when the distinction between literature and science was not so drastic These historical connections demonstrate that continuities of form resonate in both contemporary literature and science Through critical analysis and engaging prose Unified Fields bridges an important disciplinary gap by revealing how literary practice informs scientific understanding

**Medical Entomology** B.K. Tyagi, 2003-01-01

Medical Entomology has in course of time undergone a transformation from a mere traditional knowledge of the discipline to the one that stresses emphatically on harvesting a plethora of insects' infinite biomedical properties. Our familiarity with the medically important insects and other arthropods has therefore been expanded in this book to explore unlimited biomedical significance of these tiny yet most successful creatures on earth with about four million species. In addition to having a first hand information on the pestilent vectorial importance of arthropods, particularly various vector borne infections, an ingenious attempt has been made to unveil their medicinal value in different contexts. Having au fait with the fact that environment plays a key role in regulating disease epidemiology of a given vector borne infection, adequate emphasis is laid to trace the various pathways governing the linkages amongst the vector-pathogen-host triad. The book offers a detailed account of various poisonous and injurious arthropods along with the venoms' action on the human being. The book should hopefully serve a good purpose to both the students of zoology and medicine as well as professional researchers.
