PREFACE The emerging networks in our society will touch upon the life of everyone These networks have started to bring about an immense information revolution The revolution within our intellectual life will be similar to the materialistic revolution that followed the invention of the steam and the internal combustion engines From the perspective of the 1980s the information networks are indeed evolving and their influence can only be gradual However the strides of progress are accelerating in the 1990s Networks in our society offer the most candid area of convergence for the computer and the communication technologies The two technologies are mature in their own right However there are a few major factors that prevent network engineers from constructing modern communication systems from components borrowed from each of these two technologies Major innovations are happening Specialized components evolve in synergistic patterns New technologies emerge Inquisitive minds cross disciplinary barriers
