these two conferences the field has changed sufficiently both from my point of view and I believe that of my co organizer W Charles Holland to make one wonder about the label Ordered Algebraic Structures itself We recognized this from the start and right away this conference carried a subtitle or if one prefers an agenda we concentrated on the one hand on traditional themes in the theory of ordered groups including model theoretic aspects and on the other hand on matters in which topology more precisely $C(X)$ style topology and category theory would play a prominent role Plainly ordered algebra has many faces and it is becoming increasingly difficult to organize an intimate conference such as the ones encouraged in the series sponsored by CMF in this area on a broad set of themes These proceedings reflect accurately we think the spirit of the conferees but it is not a faithful record of the papers presented at the conference

When studying the ring $C(X)$ of all continuous functions from a topological space X to \mathbb{R} the concepts of z -ideals and z -filters play a crucial role However most of the advantages of the subsequent theory are lost when the ring $C(X)$ of all continuous and bounded functions is considered In order to get a similar theory applicable to $C(X)$ it is necessary to consider new concepts of e -ideals and e -filters This approach was outlined in some problem sections of the source book The main purpose of the thesis is to present solutions to the above mentioned problems
