Agricultural Supply Chains and the Challenge

of Price Risk John Williams, 2013-12-04 This book discusses the issues of integration within food and fibre supply chains and the challenges in managing price risk. The problems of integration and price risk are interwoven in agricultural supply chains with production and supply risk as well as hoarding. However, without supply chain integration through commercial trade markets, there can be no forward market upon which forward transactions and the management of price risk can be based. Without a forward market that can reduce opportunistic behaviour, there is likely to be little security of supply, particularly under high production risk and price uncertainty. Whilst price risk management is possible under certain circumstances, there are many factors that can prevent the development of forward markets or cause them to collapse, thus undermining the ability to manage price risk within acceptable risk and return parameters. Market positions therefore need to be valued and often settled daily due to the risk of contract default. In addition, the issue of currency risk and its management applies to international market positions and transactional exposures. The book analyses a range of price risk management strategies from forward contracting through to futures and options hedging, and finally to over-the-counter products. Evaluation techniques are developed to aid decision making. The author concludes that forward market development may be the exception rather than the norm, and that whilst favourable price risk management outcomes may be possible, they can sometimes be caused more by luck than through good management. It is shown how tactics are an important consideration in decision making to minimize costs and losses.

The Regulation of Insurance in China Zhen Jing, 2021-06-27 With the rapid development of China's insurance industry and the opening of the Chinese insurance market to the world, Chinese insurance law and regulation has become an increasingly relevant topic for insurance practitioners and academics. The Regulation of Insurance in China therefore provides a much needed analysis of the Chinese regulatory system. This is the first systematic text written in English on the regulation of insurance in China and provides a comprehensive and systematic analysis of rules of law and administrative regulations on China's insurance industry and insurance market, covering four levels of regulatory hierarchy: the statutory law, the regulations enacted by the central government, the State Council, the regulations developed by the insurance supervision and regulation authority of the State Council, and self-regulations by the insurance industry. This book is essential reading for insurance companies and legal practitioners looking to do business in China, as well as a reference for lawyers practising insurance law. It is also a useful resource for students and academics studying Chinese law.

Industry's Responsibility for Its Accidents George A. Bartlett, 1908 **Risk and the Regulation of Uncertainty in International Law** Monika Ambrus, Rosemary Rayfuse, Wouter Werner, 2017-10-27

Increasingly, international legal arrangements imagine future worlds or create space for experts to articulate how the future can be conceptualized and managed. With the increased specialization of international law, a series of functional regimes and sub-regimes has emerged, each with their own imageries, vocabularies, expert knowledge, and rules to translate our hopes and fears for the future into action in the present. At issue in the development of these regimes are not just competing predictions

of the future based on what we know about what has happened in the past and what we know is happening in the present. Rather, these regimes seek to deal with futures about which we know very little or nothing at all: futures that are inherently uncertain and even potentially catastrophic futures for which we need to find ways to identify, conceptualise, manage and regulate risks the existence of which we can possibly only speculate about. This book explores how the future is imagined, articulated and managed across the various fields of international law, including the use of force, maritime security, international economic and environmental law and human rights. It investigates how the future is construed in these various areas, how the costs of risk, risk regulation, risk assessment and risk management are distributed in international law, the effect of uncertain futures on the subjects of international law and the way in which international law operates when faced with catastrophic or existential risk.
