Semialgebraic Function Rings And Reflectors Of Partially Ordered Rings:

Semi-algebraic Function Rings and Reflectors of Partially Ordered Rings Niels Schwartz, James J. Madden, 2006-11-13 The book lays algebraic foundations for real geometry through a systematic investigation of partially ordered rings of semi algebraic functions Real spectra serve as primary geometric objects the maps between them are determined by rings of functions associated with the spectra The many different possible choices for these rings of functions are studied via reflections of partially ordered rings Readers should feel comfortable using basic algebraic and categorical concepts As motivational background some familiarity with real geometry will be helpful The book aims at researchers and graduate students with an interest in real algebra and geometry ordered algebraic structures topology and rings of continuous functions

Semi-Algebraic Function Rings and Reflectors of Partially Ordered Rings Niels Schwartz, James J. Madden, 2014-01-15 Spectral Spaces Max Dickmann, Niels Schwartz, Marcus Tressl, 2019-03-21 Spectral spaces are a class of topological spaces They are a tool linking algebraic structures in a very wide sense with geometry They were invented to give a functional representation of Boolean algebras and distributive lattices and subsequently gained great prominence as a consequence of Grothendieck's invention of schemes There are more than 1 000 research articles about spectral spaces but this is the first monograph It provides an introduction to the subject and is a unified treatment of results scattered across the literature filling in gaps and showing the connections between different results The book includes new research going beyond the existing literature answering questions that naturally arise from this comprehensive approach The authors serve graduates by starting gently with the basics For experts they lead them to the frontiers of current research making this book a valuable reference source

Ordered Algebraic Structures Jorge Martínez, 2013-03-14 From the 28th of February through the 3rd of March 2001 the Department of Mathematics of the University of Florida hosted a conference on the many aspects of the field of Ordered Algebraic Structures Officially the title was Conference on Lattice Ordered Groups and Γ Rings but its subject matter evolved beyond the limitations one might associate with such a label This volume is officially the proceedings of that conference although likewise it is more accurate to view it as a complement to that event The conference was the fourth in what has turned into a series of similar conferences on Ordered Algebraic Structures held in consecutive years The first held at the University of Florida in Spring 1998 was a modest and informal affair The fifth is in the final planning stages at this writing for March 7-9 2002 at Vanderbilt University And although these events remain modest and reasonably informal their scope has broadened as they have succeeded in attracting mathematicians from other related fields as well as from more distant lands

Valuation Theory and Its Applications Franz-Viktor Kuhlmann, Salma Kuhlmann, Murray Marshall, 2002-01-01 This book is the first of two proceedings volumes stemming from the International Conference and Workshop on Valuation Theory held at the University of Saskatchewan Saskatoon SK Canada Valuation theory arose in the early part of the twentieth century in connection with number theory and has many important

applications to geometry and analysis the classical application to the study of algebraic curves and to Dedekind and Prüfer domains the close connection to the famous resolution of the singularities problem the study of the absolute Galois group of a field the connection between ordering valuations and quadratic forms over a formally real field the application to real algebraic geometry the study of noncommutative rings etc The special feature of this book is its focus on current applications of valuation theory to this broad range of topics Also included is a paper on the history of valuation theory The book is suitable for graduate students and research mathematicians working in algebra algebraic geometry number theory and mathematical logic

Selected Preserver Problems on Algebraic Structures of Linear Operators and on Function Spaces L. Molnár, 2006-11-15 The territory of preserver problems has grown continuously within linear analysis This book presents a cross section of the modern theory of preservers on infinite dimensional spaces operator spaces and function spaces through the author's corresponding results Special emphasis is placed on preserver problems concerning some structures of Hilbert space operators which appear in quantum mechanics In addition local automorphisms and local isometries of operator algebras and function algebras are discussed in detail

Construction of Global Lyapunov Functions Using Radial Basis Functions Peter Giesl, 2007-04-11 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples

Value-Distribution of L-Functions Jörn Steuding, 2007-05-26 These notes present recent results in the value distribution theory of L functions with emphasis on the phenomenon of universality Universality has a strong impact on the zero distribution Riemann's hypothesis is true only if the Riemann zeta function can approximate itself uniformly The text proves universality for polynomial Euler products The author's approach follows mainly Bagchi's probabilistic method Discussion touches on related topics almost periodicity density estimates Nevanlinna theory and functional independence
