Sullivan,Leeanne Mary Carey,2021-03-04 Culture and the Senses Prof. Kathryn Geurts,2003-01-09 Adding her stimulating and finely framed ethnography to recent work in the anthropology of the senses Kathryn Geurts investigates the cultural meaning system and resulting sensorium of Anlo Ewe speaking people in southeastern Ghana Geurts discovered that the five senses model has little relevance in Anlo culture where balance is a sense and balancing in a physical and psychological sense as well as in literal and metaphorical ways is an essential component of what it means to be human Much of perception falls into an Anlo category of seselelame literally feel feel at flesh inside in which what might be considered sensory input including the Western sixth sense notion of intuition comes from bodily feeling and the interior milieu The kind of mind body dichotomy that pervades Western European Anglo American cultural traditions and philosophical thought is absent Geurts relates how Anlo society privileges and elaborates what we would call kinesthesia which most Americans would not even identify as a sense After this nuanced exploration of an Anlo Ewe theory of inner states and their way of delineating external experience readers will never again take for granted the naturalness of sight touch taste hearing and

smell     Sensation and Measurement H.R. Moskowitz, B. Scharf, J.C. Stevens, 2012-12-06 We planned this book as a Festschrift for Smitty Stevens because we thought he might be retiring around 1974 although we knew very well that only death or deep illness would stop Smitty from doing science Death came suddenly unexpectedly after a full day of skiing at Vail Colorado on the annual trip with wife Didi to the Winter Conference on Brain Research Smitty liked winter conferences near ski resorts and often tried to get us other psychophysicists to organize one Every person is unique Smitty would have said it's mainly because each of us has so many genes that two combinations just alike would be well nigh impossible But most of us strive in many ways to be like others and to abide by the norms some smaller number try even harder to be unlike other people as a result many persons seem to lose their uniqueness their individuality Not Smitty He tried neither to be like others nor to be different He took himself as he found himself and ascribed peculiarities strengths and weaknesses to his pioneering Utah forebears in whom he took much pride His was the true and right nonconformity He approached each task each problem ready to grapple with the facts and set them into meaningful order And if the answer he came up with was different from everyone else's well that was too bad     The Smells and Senses of Antiquity in the Modern Imagination Adeline Grand-Clément, Charlotte Ribeyrol, 2021-12-16 This volume tackles the role of smell under explored in relation to the other senses in the modern rejection reappraisal and idealisation of antiquity Among the senses olfaction in particular has often been overlooked in classical reception studies due to its evanescent nature which makes this sense difficult to apprehend in its past instantiations And yet the smells associated with a given figure or social group convey a rich imagery which in turn connotes specific values perfumes scents and foul odours both reflect and mould the ways in which a society thinks or acts Smells also help to distinguish between male and female citizens and strangers and play an important role during rituals The Smells and Senses of Antiquity in the Modern Imagination focuses on the representation of ancient smells both enticing and repugnant in the visual and performative arts from the late 18th century up to the 21st century The individual contributions explore painting sculpture literature and film but also theatrical performance museum exhibitions advertising television series historical reenactment and graphic novels which have all played a part in reshaping modern audiences perceptions and experiences of the antique     *The Principles of Psychology: Sensation ; Imagination ; Perception of "things" ; Perception of space ; Perception of reality ; Reasoning ; Production of movement ; Instinct ; Emotions ; Will ; Hypnotism ; Necessary truths and the effects of experience* William James, 1918     **Affective Sciences through the Chemical Senses** Géraldine Coppin, Valentina Parma, Bettina M. Pause, 2017-01-13 In people's minds smells flavors and affective phenomena are perceived as closely linked But is it genuinely the case The scientific study of this question is a rapidly expanding field both in healthy and in clinical populations Although still under studied in comparison to other sensory modalities chemical senses have proven to bring unique knowledge in the understanding of affective phenomena In this context this Research Topic is aimed to offer a snapshot of the present knowledge and questions raised in this field Topics

include but are not limited to affects elicited by odors and or flavors in different individuals contexts or cultures emotional potency of odors in guiding human behavior and cognition e g attention memory formation decisions and choices withdrawal and approach behavior affects communicated by body odors affect regulation disorders and chemosensory perception Studies on the biological underpinnings of these effects are also included      **Loudness** Mary Florentine,Arthur N.

Popper,Richard R. Fay,2010-11-04 Loudness is the primary psychological correlate of intensity When the intensity of a sound increases loudness increases However there exists no simple one to one correspondence between loudness and intensity loudness can be changed by modifying the frequency or the duration of the sound or by adding background sounds Loudness also changes with the listener s cognitive state Loudness provides a basic reference for graduate students consultants clinicians and researchers with a focus on recent discoveries The book begins with an overview of the conceptual thinking related to the study of loudness addresses issues related to its measurement and later discusses the physiological effects of loud sounds reaction times and electrophysiological measures that correlate with loudness Loudness in the laboratory loudness of steady state sounds and the loudness of time varying sounds are also covered as are hearing loss and models

Dallenbach,Madison Bentley,Edwin Garrigues Boring,Margaret Floy Washburn,1924      *Dermatotoxicology Methods* Francis N. Marzulli,Howard I. Maibach,2019-05-07 This work presents and evaluates methods employed to identify the potential of certain types of chemicals to adversely affect the skin A variety of test methods are included such as tests for skin penetration metabolism irritation the skin immune system photo effects skin cancer and topical effects of retinoids and depigmenting chemicals Tests for chemicals that affect the reproductive and nervous system are also included Both animal and human tests that have been standardised and tests that are under development and employ animal alternatives are addressed in this book Besides different testing methods a rationale for accepting non animal models and a review of some regulatory agency discussions about animal alternative tests are included      *The Neural Bases of Multisensory Processes* Micah M. Murray,Mark T.

Wallace,2011-08-25 It has become accepted in the neuroscience community that perception and performance are quintessentially multisensory by nature Using the full palette of modern brain imaging and neuroscience methods The Neural Bases of Multisensory Processes details current understanding in the neural bases for these phenomena as studied across species stages of development and clinical statuses Organized thematically into nine sub sections the book is a collection of contributions by leading scientists in the field Chapters build generally from basic to applied allowing readers to ascertain how fundamental science informs the clinical and applied sciences Topics discussed include Anatomy essential for understanding the neural substrates of multisensory processing Neurophysiological bases and how multisensory stimuli can dramatically change the encoding processes for sensory information Combinatorial principles and modeling focusing on efforts to gain a better mechanistic handle on multisensory operations and their network dynamics Development and

plasticity Clinical manifestations and how perception and action are affected by altered sensory experience Attention and spatial representations The last sections of the book focus on naturalistic multisensory processes in three separate contexts motion signals multisensory contributions to the perception and generation of communication signals and how the perception of flavor is generated The text provides a solid introduction for newcomers and a strong overview of the current state of the field for experts

**Color Vision Sensation and Perception** Marcelo Fernandes Costa, 2016-09-15 Color vision is considered a microcosm of the visual science Special physiological and psychological processes make this scientific topic an intriguing and complex research field that can aggregate around molecular biologists neurophysiologists physicists psychophysicists and cognitive neuroscientists Our purpose is to present the frontier knowledge of this area of visual science showing in the end the future prospects of application and basic studies of color perception

**An Analytical Study of Visual Perceptions** Anna Sophie Roberts, 1917

**The Psychoses** Jacques Lacan, 2013-11-19 During the third year of his famous seminar Jacques Lacan gives a concise definition of psychoanalysis Psychoanalysis should be the science of language inhabited by the subject From the Freudian point of view man is the subject captured and tortured by language Since psychosis is a special but emblematic case of language entrapment Lacan devotes much of this year to grappling with distinctions between the neuroses and the psychoses As he compared the two relationships symmetries and contrasts emerge that enable him to erect a structure for psychosis Freud's famous case of Daniel Paul Schreber is central to Lacan's analysis In demonstrating the many ways that the psychotic is inhabited possessed by language Lacan draws upon Schreber's own account of his psychosis and upon Freud's notes on this case of paranoia The analysis of language is both fascinating and enlightening

The Seminar of Jacques Lacan Jacques Lacan, 1988 Often controversial always inspired French intellectual Jacques Lacan begins the twentieth year of his famous Seminar by weighing theories of the relationship between the desire for love and the attainment of knowledge from such influential and diverse thinkers as Aristotle Marx and Freud From here he leads us through mathematics philosophy religion and naturally psychoanalysis into an entirely new and unexpected way of interpreting the two most fundamental human drives Anticipated by English speaking readers for more than twenty years this annotated translation presents Lacan's most sophisticated work on love desire and jouissance

**Principles of Receptor Physiology** Werner R. Loewenstein, 2013-03-07 Why should there be a handbook of sensory physiology and if so why now The editors have asked this question marshalled all of the arguments that seemed to speak against their project and then discovered that most of these arguments really spoke in favor of it there seemed to be no doubt that the attempt should be made and that it should be made now No complete overview of sensory physiology has been attempted since Bethe's Handbuch der normalen und pathologischen Physiologie nearly forty years ago Since then the field has evolved with unforeseen rapidity Although electric probing of single peripheral nerve fibers was begun by ADRIAN and ZOTTERMAN as early as 1926 in the somatosensory system and extended to single optic nerve fibers by HARTLINE in 1932 the real upsurge

of such single unit studies has only come during the last two decades Single cell electrophysiology has now been applied to all sensory modalities and on almost every conceivable phylogenetic level It has begun to clarify peripheral receptor action and is adding to our understanding of the central processing of sensory information In parallel with these developments there have been fundamental studies of the physics and chemistry of the receptors themselves these studies are leading to insights into the mechanisms of energy transduction and nerve impulse initiation      Spatial Senses Tony Cheng, Ophelia Deroy, Charles Spence, 2019-05-29 This collection of essays brings together research on sense modalities in general and spatial perception in particular in a systematic and interdisciplinary way It updates a long standing philosophical fascination with this topic by incorporating theoretical and empirical research from cognitive science neuroscience and psychology The book is divided thematically to cover a wide range of established and emerging issues Part I covers notions of objectivity and subjectivity in spatial perception and thinking Part II focuses on the canonical distal senses such as vision and audition Part III concerns the chemical senses including olfaction and gustation Part IV discusses bodily awareness peripersonal space and touch Finally the volume concludes with Part V on multimodality Spatial Senses is an important contribution to the scholarly literature on the philosophy of perception that takes into account important advances in the sciences      **Handbook on Mobile and Ubiquitous Computing** Laurence T. Yang, Evi Syukur, Seng W. Loke, 2016-04-19 Consolidating recent research in the area the Handbook on Mobile and Ubiquitous Computing Status and Perspective illustrates the design implementation and deployment of mobile and ubiquitous systems particularly in mobile and ubiquitous environments modeling database components and wireless infrastructures Supplying an overarching perspective      Psychophysics Beyond Sensation Christian Kaernbach, Erich Schröger, Hermann Müller, Hermann Müller, Erich Schröger, 2004-05-20 This volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation This book's goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action The dynamics and timing of human performance are a further important issue within this extended framework of psychophysics Given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes These issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling The book is divided into four sections Part I presents contributions concerning the classical domain of psychophysical judgment The next two parts are concerned with elementary and higher order processes and the concluding section deals with psychophysical models The sections are introduced by guest editorials contributed by independent authors These editorials present the authors' personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them While also voicing their own and sometimes different point of view they contribute to the process of discussion that

makes science so exciting This volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today Established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

**IoT Edge Solutions for Cognitive Buildings**  
Franco Cicirelli, Antonio Guerrieri, Andrea Vinci, Giandomenico Spezzano, 2022-12-10 This book outlines the promise of the field of the Cognitive Internet of Things when it is applied to cognitive buildings After an introduction the authors discuss the goals of cognitive buildings such as operation in a more efficient flexible interactive intuitive and sustainable way They go on to outline the benefits that these technologies promise to building owners occupants and their environments that range from reducing energy consumption and carbon footprint to promoting health well being and productivity The authors outline technologies that provide buildings and equipment with the ability to collect aggregate and analyze data and how this information can be collected by sensors and related to internal conditions and settings energy consumption user requests and preferences to maintain comfort and save energy This book is of interest to practitioners researchers students and professors in IoT and smart cities
