Paul A. Dudchenko, 2010 At some point in our lives most of us have been lost How does this happen What are the limits of our ability to find our way Do we have an innate sense of direction How people get lost reviews the psychology and neuroscience of navigation It starts with a history of studies looking at how organisms solve mazes It then reviews contemporary studies of spatial cognition and the wayfinding abilities of adults and children It then considers how specific parts of the brain provide a cognitive map and a neural compass This book also considers the neurology of spatial disorientation and the tendency of patients with Alzheimer's disease to lose their way Within the book the author proposes that we get lost because our brain's compass becomes misoriented This book is written for anyone with an interest in navigation and the brain It assumes no specialised knowledge of neuroscience but covers recent advances in our understanding of how the brain represents space
