Acquisition for Sensor Systems H.R. Taylor, 2013-03-14 Data acquisition is concerned with taking one or more analogue signals and converting them to digital form with sufficient accuracy and speed to be ready for processing by a computer. The increasing use of computers makes this an expanding field and it is important that the conversion process is done correctly because information lost at this stage can never be regained no matter how good the computation. The old saying garbage in garbage out is very relevant to data acquisition and so every part of the book contains a discussion of errors where do they come from how large are they and what can be done to reduce them. The book aims to treat the data acquisition process in depth with less detailed chapters on the fundamental principles of measurement sensors and signal conditioning. There is also a chapter on software packages which are becoming increasingly popular. This is such a rapidly changing topic that any review of available programs is bound to be out of date before the book reaches the readers. For this reason I have described the data handling which is available in various types of program and left it to the reader to select from whatever is on the market at the time.

Sensors, Displays and Signal Conditioning Robert B. Hood, 1974 *Sensors and Low Power Signal Processing* Syed Kamrul Islam, Mohammad Rafiqul Haider, 2009-12-02 Low power sensors and their applications in various fields ranging from military to civilian lives have made tremendous progress in the recent years. Low power and extended battery life are the key focuses for long term reliable and easy operation of these sensors. *Sensors and Low Power Signal Processing* provides a general overview of a sensor's working principle and a discussion of the emerging sensor technologies including chemical, electro-chemical and MEMS based sensors. Also included is a discussion on design challenges associated with low power analog circuits and the schemes to overcome them. Finally a short discussion of some of the simple wireless telemetry schemes best suited for low power sensor applications and sensor packaging issues is discussed. Applications and sensor prototypes included are environmental monitoring, health care monitoring and issues related to the development of sensor prototypes and associated electronics to achieve high signal to noise ratio will also be presented.
