**Space and Oceans** ATF Press, 2022-10-01. There is a growing concern over the ubiquitous distribution of plastic pollution that is evolving in the Beaufort Gyre in the Arctic Ocean prompting international collaboration and new environmental measures. Marine pollution is recognised as an immediate threat to both land and marine ecosystems. Satellites have proven useful in identifying ocean plastic patches and current movements in other oceans but little research has been applied to the Arctic a region that impacts eight countries making up the Arctic Circle. This interdisciplinary team project investigates the use of Sentinel 2 Sentinel 6 Fourier Transform Spectroscopy stratospheric balloons and autonomous underwater vehicles to provide an integrated strategy including communication and outreach to tackling marine plastic pollution while recognizing that it is necessary to also prevent plastics from entering the ocean in the first place.      **The**

**Science on the Pacific Coast** ,1915      *Designing Evolutionary Algorithms for Dynamic Environments* Ronald W.

Morrison,2013-06-29 The robust capability of evolutionary algorithms EAs to find solutions to difficult problems has permitted them to become popular as optimization and search techniques for many industries Despite the success of EAs the resultant solutions are often fragile and prone to failure when the problem changes usually requiring human intervention to keep the EA on track Since many optimization problems in engineering finance and information technology require systems that can adapt to changes over time it is desirable that EAs be able to respond to changes in the environment on their own This book provides an analysis of what an EA needs to do to automatically and continuously solve dynamic problems focusing on detecting changes in the problem environment and responding to those changes In this book we identify and quantify a key attribute needed to improve the detection and response performance of EAs in dynamic environments We then create an enhanced EA designed explicitly to exploit this new understanding This enhanced EA is shown to have superior performance on some types of problems Our experiments evaluating this enhanced EA indicate some previously unknown relationships between performance and diversity that may lead to general methods for improving EAs in dynamic environments Along the way several other important design issues are addressed involving computational efficiency performance measurement and the testing of EAs in dynamic environments

**European Autonomy in Space** Cenan Al-Ekabi,2015-01-07 The volume provides analyses and evaluations of the continuing importance of Europe's autonomy in its access to space as a key driver in the development of European space capabilities From a detailed historical analysis of some of the pitfalls of dependence in the space industry experts analyse the full range of current European space capabilities and identify areas where autonomy is both possible and required even in a situation of severe budgetary constraints The contributions present a comprehensive overview of European efforts in a broad range of areas including energy culture science and security access to space space applications human spaceflight security and space situational awareness and strategic issues They make a cogent strategic and economic case for policy makers to continue to bear in mind the importance of autonomous space capabilities even in an interdependent globalised world

**Transatlantic Space Politics** Sheng-Chih Wang, 2013-05-29 This book examines transatlantic politics through an analysis of 60 years of US European strategic interaction in space The significance of space politics for the study of transatlantic relations receives surprisingly little scholarly attention As a theatre of interaction transatlantic space politics reflects the vicissitudes of European and US power in the international system An understanding of space politics is therefore vital in understanding the status and prospect of the transatlantic order Using established IR theories the author investigates transatlantic space politics and proposes a theoretical explanation which is distinct from the conventional wisdom of the transatlantic security community More specifically he distinguishes between the constitutive and regulatory effects of the transatlantic security community an approach rarely employed in other research in the field Overall this book suggests not only that the transatlantic institutional pillar requires repair but also that the ideational factors need to be revitalised in order to consolidate the transatlantic alliance This book will be of much interest to students of space power transatlantic politics strategic studies foreign policy and IR security studies in general
