Serengeti II Dynamics Management And Conservation Of An Ecosystem:

Serengeti II A. R. E. Sinclair, Peter Arcese, 1995-08 *Serengeti II Dynamics Management and Conservation of an Ecosystem* brings together twenty years of research by leading scientists to provide the most thorough understanding to date of the spectacular Serengeti Mara ecosystem in East Africa home to one of the largest and most diverse populations of animals in the world Building on the groundwork laid by the classic *Serengeti Dynamics of an Ecosystem* published in 1979 by the University of Chicago Press this new book integrates studies of the ecosystem at every level from the plants at the bottom of the visible food chain to the many species of herbivores and predators to the system as a whole Drawing on new data from many long term studies and from more recent research initiatives and applying new theory and computer technology the contributors examine the large scale processes that have produced the Serengeti's extraordinary biological diversity as well as the interactions among species and between plants and animals and their environment They also introduce computer modeling as a tool for exploring these interactions employing this new technology to test and anticipate the effects of social political and economic changes on the entire ecosystem and on particular species and so to shape future conservation and management strategies

David S. Wilcove, 2007-11 Animal migration is a magnificent sight a mile long blanket of cranes rising from a Nebraska river and filling the sky hundreds of thousands of wildebeests marching across the Serengeti a blaze of orange as millions of monarch butterflies spread their wings to take flight Nature's great migrations have captivated countless spectators none more so than premier ecologist David S Wilcove In *No Way Home* his awe is palpable as are the growing threats to migratory animals We may be witnessing a dying phenomenon among many species Migration has always been arduous but today's travelers face unprecedented dangers Skyscrapers and cell towers lure birds and bats to untimely deaths fences and farms block herds of antelope salmon are caught en route between ocean and river breeding and wintering grounds are paved over or plowed and global warming disrupts the synchronized schedules of predators and prey The result is a dramatic decline in the number of migrants Wilcove guides us on their treacherous journeys describing the barriers to migration and exploring what compels animals to keep on trekking He also brings to life the adventures of scientists who study migrants Often as bold as their subjects researchers speed wildly along deserted roads to track birds soaring overhead explore glaciers in search of frozen locusts and outfit dragonflies with transmitters weighing less than one one hundredth of an ounce Scientific discoveries and advanced technologies are helping us to understand migrations better but alone they won't stop sea turtles and songbirds from going the way of the bison or passenger pigeon What's required is the commitment and cooperation of the far flung countries migrants cross long before extinction is a threat As Wilcove writes protecting the abundance of migration is key to protecting the glory of migration *No Way Home* offers powerful inspiration to preserve those glorious journeys

Model Systems in Behavioral Ecology Lee Alan Dugatkin, 2019-12-31 A key way that behavioral ecologists develop general theories of animal behavior is by studying one species or a closely related group of species model

systems over a long period This book brings together some of the field's most respected researchers to describe why they chose their systems how they integrate theoretical conceptual and empirical work lessons for the practice of the discipline and potential avenues of future research Their model systems encompass a wide range of animals and behavioral issues from dung flies to sticklebacks dolphins to African wild dogs from foraging to aggression territoriality to reproductive suppression Model Systems in Behavioral Ecology offers an unprecedented systems focus and revealing insights into the confluence of personal curiosity and scientific inquiry It will be an invaluable text for behavioral ecology courses and a helpful overview and a preview of coming developments for advanced researchers The twenty five chapters are divided into four sections insects and arachnids amphibians and reptiles birds and mammals In addition to the editor the contributors include Geoff A Parker Thomas D Seeley Naomi Pierce Kern Reeve Gerald S Wilkinson Bert H Ildobler and Flavio Roces George W Uetz Michael J Ryan and Gil Rosenthal Judy Stamps H Carl Gerhardt Barry Sinervo Robert Warner Manfred Milinski David F Westneat Alan C Kamil and Alan B Bond Paul Sherman Jerram L Brown Anders Pape Møller Marc Bekoff Richard C Connor Joan B Silk Christopher Boesch Scott Creel A H Harcourt and Tim Caro and M J Kelly

The Biology of African Savannahs
 Bryan Shorrocks, William Bates, 2015 Savannah habitats comprise an ecologically important but ultimately fragile ecosystem They constitute one of the largest biomes on Earth covering almost 20% of the land surface and can be simply described as tropical and subtropical grasslands with scattered bushes and trees Most savannahs occur in Africa although smaller areas can be found in South America India and Australia They form a rich mosaic of diverse ecosystems and this book offers a concise but comprehensive introduction to their ecology biodiversity and conservation The Biology of African Savannahs describes the major plants grasses and trees such as Acacia and animals mainly large mammals that live in this habitat and examines the biological and ecological factors that influence their population size interactions such as predation and community composition Conservation issues such as climate change hunting and conflict between wildlife and domestic animals are also discussed This new edition has been updated throughout with the latest research in the field and contains new technique boxes which introduce readers to some of the analytical methods used to study African savannahs This accessible text is suitable for both senior undergraduate and graduate students taking courses in savannah and tropical ecology as part of a wider ecology and or conservation biology degree programme It will also be of relevance and use to the many professional ecologists and conservation practitioners requiring a concise but authoritative overview of the topic

East Africa's Human Environment Interactions Rob Marchant, 2022-01-13 This book is an ambitious integration of ecological archaeological anthropological land use sciences drawing on human geography demography and economics of development across the East Africa region It focuses on understanding and unpicking the interactions that have taken place between the natural and unnatural history of the East African region and trace this interaction from the evolutionary foundations of our species c 200 000 years ago through the outwards and inwards human migrations often associated with

the adoption of subsistence strategies new technologies and the arrival of new crops The book will explore the impact of technological developments such as transitions to tool making metallurgy and the arrival of crops also involved an international dimension and waves of human migrations in and out of East Africa Time will be presented with a widening focus that will frame the contemporary with a particular focus on the Anthropocene last 500 years to the present day Many of the current challenges have their foundations in precolonial and colonial history and as such there will be a focus on how these have evolved and the impact on environmental and human landscapes Moving into the Anthropocene era there was increasing exposure to the International drivers of change such as those associated with Ivory and slave trade These international trade routes were tied into the ensuing decimation of elephant populations through to the exploitation of natural mineral resources have been sought after through to the present day The book will provide a balanced perspective on the region the people and how the natural and unnatural histories have combined to create a dynamic region These historical perspectives will be galvanized to outline the future changes and the challenges they will bring around such issues as sustainable development space for wildlife and people and the position of East Africa within a globalized world and how this is potentially going to evolve over the coming decades

National Park Science Jane Carruthers, 2017-08-17 This book explains the changing philosophies and permutations in research and management of South Africa's national parks during the twentieth century

Humans and Hyenas Keith Somerville, 2021-03-18 Humans and Hyenas examines the origins and development of the relationship between the two to present an accurate and realistic picture of the hyena and its interactions with people The hyena is one of the most maligned misrepresented and defamed mammals It is still despite decades of research led knowledge seen as a skulking cowardly scavenger rather than a successful hunter with complex family and communal systems Hyenas are portrayed as sex shifting deviants grave robbers and attackers of children in everything from African folk tales through Greek and Roman accounts of animal life to Disney's The Lion King depicting hyenas with a lack of respect and disgust despite the reality of their behaviour and social structures Combining the personal in depth mining of scientific papers about the three main species and historical accounts Keith Somerville delves into our relationship with hyenas from the earliest records from millennia ago through the accounts by colonisers to contemporary coexistence where hyenas and humans are forced into ever closer proximity due to shrinking habitats and loss of prey Are hyenas fated to retain their bad image or can their amazing ability to adapt to humans more successfully than lions and other predators lead to a shift in perspective This book will be of great interest to students and scholars in the environmental sciences conservation biology and wildlife and conservation issues

Biology, Medicine, and Surgery of Elephants Murray Fowler, Susan K. Mikota, 2008-02-28 Elephants are possibly the most well known members of the animal kingdom The enormous size unusual anatomy and longevity of elephants have fascinated humans for millennia Biology Medicine and Surgery of Elephants serves as a comprehensive text on elephant medicine and surgery Based on the expertise of 36 scientists and clinical veterinarians

this volume covers biology husbandry veterinary medicine and surgery of the elephant as known today Written by the foremost experts in the field Comprehensively covers both Asian and African elephants Complete with taxonomy behavioral geographical and systemic information Well illustrated and organized for easy reference **Awakening Spirits** Richard Reading, Brian Miller, Amy Masching, Rob Edward, Michael Phillips, 2010-06-01 This illustrated collection offers fascinating insight on restoring the wolf population to the Southern Rockies Detailed reports by wildlife biologists geographers legal and policy experts and conservationists provide a comprehensive look at not only the ecological imperatives but also the history legal framework and public attitudes affecting the future of wolves **Rural Resources and Local Livelihoods in Africa** NA NA, 2016-09-27 Top scholars examine issues which lead readers to better understand environmental change in the African continent and its effects on rural African livelihoods Each of the studies in this book concerns four main issues conservation biodiversity and environment land use and livelihoods environmental change and policies for conservation and development The volume looks closely at the details of rural resource use access and control the social institutions which shape this and the effects on African environments It is not possible to understand livelihoods in Africa a central issue for all social and economic questions without grasping the interplay between environmental change and the sustainability of rural livelihoods The volume is groundbreaking in its detailed examination of this interplay and its importance in grasping the roots of poverty and potential for its alleviation and for its unique combination of natural and social science methods *The Ecology of Large Mammals in Central Yellowstone* Robert A. Garrott, Patrick J. White, Fred G.R. Watson, 2008-11-25 This book is an authoritative work on the ecology of some of America s most iconic large mammals in a natural environment and of the interplay between climate landscape and animals in the interior of the world s first and most famous national park Central Yellowstone includes the range of one of the largest migratory populations of bison in North America as well as a unique elk herd that remains in the park year round These populations live in a varied landscape with seasonal and often extreme patterns of climate and food abundance The reintroduction of wolves into the park a decade ago resulted in scientific and public controversy about the effect of large predators on their prey a debate closely examined in the book Introductory chapters describe the geography geology and vegetation of the ecosystem The elk and bison are then introduced and their population ecology described both pre and post wolf introduction enabling valuable insights into the demographic and behavioral consequences for their ungulate prey Subsequent chapters describe the wildlife human interactions and show how scientific research can inform the debate and policy issues surrounding winter recreation in Yellowstone The book closes with a discussion of how this ecological knowledge can be used to educate the public both about Yellowstone itself and about science ecology and the environment in general Yellowstone National Park exemplifies some of the currently most hotly debated and high profile ecological wildlife management and environmental policy issues and this book will have broad appeal not only to academic ecologists but also to natural resource students managers biologists policy makers

Richardson, Piero Genovesi, 2013-11-27 This book is the first comprehensive global review of all aspects of alien plant invasions in protected areas It provides insights into advances in invasion ecology emanating from work in protected areas and the link to locally relevant management support for protected areas The book provides in depth case studies illuminating interesting and insightful knowledge that can be shared across the global protected area network The book includes the collective understanding of 80 ecologists and managers to extract as much information as possible that will support the long term management of protected areas and the biodiversity and associated ecosystem services they maintain This outstanding volume draws together pretty much all that can be said on this

topic ranging from the science through policy to practical action Dr Simon N Stuart IUCN Species Survival Commission UK This important and timely volume addresses two of the most serious problems affecting biodiversity conservation today assessing the extent to which protected areas are impacted by biological invasions and the complex problems of managing these impacts Written by leading specialists it provides a comprehensive overview of the issues and gives detailed examples drawn from protected areas across the world Professor Vernon H Heywood School of Biological Sciences University of Reading UK Biotic Interactions in the Tropics David Burslem,Michelle Pinard,Sue Hartley,2005-09-08 Tropical ecosystems house a significant proportion of global biodiversity To understand how these ecosystems function we need to appreciate not only what plants animals and microbes they contain but also how they interact with each other This volume first published in 2005 synthesises the state of knowledge in this area with chapters providing reviews or case studies drawn from research conducted in both Old and New World tropics and including biotic interactions among taxa at all trophic levels In most chapters plants typically trees are the starting point but taken together the chapters consider interactions of plants with other plants with micro organisms and with animals and the inter relationships of human induced disturbance with interactions among species An underlying theme of the volume is the attempt to understand the maintenance of high diversity in tropical regions which remains one of the most significant unexplained observations in ecological studies

Larger Carnivores of the African Savannas Jacobus du P. Bothma,Clive Walker,2013-11-11 The African savannas are rich in wildlife Yet they are also increasingly threatened by expanding human populations The interrelationship between vast prey herds and their predator offers fascinating insights into the world of African wildlife Moreover the larger carnivores are sensitive measures of environmental quality and serve as early warning systems to environmental degradation The book presents the ecology of all African carnivores that are larger than jackals in an ordered and scientific way It is augmented by many colour photographs taken by both authors and excellent sketches by the internationally renowned wildlife artist Clive Walker depicting the life and habitat of these carnivores *Authenticity in Nature* Nigel Dudley,2012-03-12 This book examines the concept of naturalness in ecosystems discusses its values and considers choices about the level of naturalness in conservation efforts The author argues that all ecosystems have been modified and the idea of places untouched by humans is a myth But there are large differences in the degree of modification and levels of naturalness which can be identified Changes are not always irreversible some apparent wilderness areas are sites of former civilizations There is no longer any simple distinction possible between natural and cultural systems In the future society will to some extent choose the degree of naturalness in land and seascapes The growth of protected areas is an early sign of this as are changes in forest management dam removal and control of invasive species To make informed choices about these areas the author shows that we must understand the characteristics and values of naturally regulating ecosystems their practical benefits social values and management needs *Authenticity in Nature* uses a rigorous definition of authenticity to help in the

understanding and measurement of naturalness It discusses the choices facing us and some of the information we need to make decisions relating to land and water management Practical issues of management and numerous terrestrial and aquatic examples from around the world are discussed It is an optimistic and highly original book aiming to make genuine advances in our understanding and management of natural systems *Ecosystem Function in Savannas* Michael J. Hill, Niall P Hanan, 2010-11-17 Fascinating and diverse savanna ecosystems support a combination of pastoral and agropastoral communities alongside wild and domestic herbivores that can be found nowhere else This diversity has made the study of these areas problematic *Ecosystem Function in Savannas Measurement and Modeling at Landscape to Global Scales* addresses some of the d
