on Derived Attributes of Targets Xing Yang, Yihua Hu, 2023-08-22 This book highlights the novel photoelectric detection technique on derived attributes of targets Photoelectric detection on derived attributes of targets is a new target detection and monitoring method It is achieved by acquiring three types of attributes of the target including those that reflect the essential features of parts of the target those directly generated from the target and those synthesized by the target features The book introduces the classification of derived attributes of targets and describes typical detection methods Emphases are put on laser detection of aerial moving targets using derived attributes such as the disturbance of atmospheric wind fields trailing vortexes and the disturbance of atmospheric components The authors also elaborate on visible light imaging detection using derived attributes such as retroreflection and the identification of target carriers Besides the synthetic attributes processing of integrated aerospace images is introduced for the detection of targets on the ground and sea surfaces This book can be used as a good reference for researchers engaged in the fields of photoelectric detection target detection and image processing and as a reference book for senior undergraduates and postgraduates in relevant majors

Technical Services Cost Studies in ARL Libraries , 1986 Haptics: Perception, Devices and Scenarios Manuel Ferre, 2008-06-28 This book constitutes the refereed proceedings of the 6th International Conference on Human Haptic Sensing and Touch Enabled Computer Applications EuroHaptics 2008 held in Madrid Spain in June 2008 The 119 revised full papers presented were carefully reviewed and selected from 150 submissions The papers are organized in topical sections on control and technology haptic perception and psychophysics haptic devices haptics rendering and display multimodal interaction and telepresence as well as haptic applications *Elements of Human Performance* Andries F. Sanders, Andries

Sanders,2013-02-01 This book presents a review of research on reaction processes and attention as it has evolved over the last 40 years in the context of the information processing tradition in cognitive psychology It is argued and demonstrated that issues of reaction processes and attention are closely interconnected Their common conceptualization can be seen in terms of limited processing capacity on the one hand and stage analysis on the other This volume concludes that at present a stage analysis metaphor offers better prospects as a conceptual starting point the limited capacity metaphor was strongly tied to the digital computers of the 60s The emphasis of the book is on behavioral research but summaries of related findings on evoked potentials and other psychophysiological variables are included as well From this perspective it may be of interest to neuropsychologists who want to learn about the present state of cognitive experimental paradigms *Elements of Human Performance* also addresses the question of the relationship between basic research and applications in the said areas This is particularly urgent in view of the now common notion that the results of many simplified laboratory tasks may be artifactual and of little applied value A back to back research strategy is outlined to assess the validity of basic research results for real life tasks

Elements of Human Performance Andries Frans Sanders,1998 The book focuses on 2 aspects of human performance theory reaction processes and attention These aspects are often ignored by treatments of cognitive psychology but are central to understanding an individual s performance

United States Patent Office United States. Patent Office,1958 *Free Us from Bullying* Paul T. Coughlin,2018-08-14

Much of what we believe about bullying isn't true An estimated twenty million oppressed children need our help today A critical mission field awaiting Christians is to combat bullying and proclaim liberty to wounded children To counter bullying we must first understand some common misconceptions It is not necessarily true that bullies have low self esteem and come from abusive homes It is not true that kids who aren't bullied are indifferent to those who are Bullying is not a school problem and teachers are not the frontline defense Children who are bullied do not become stronger adults Bullies cannot be stopped merely with more compassion and understanding In fact bullying stems from the same roots as racism sexual harassment and even genocide and it requires people to combat it in similar ways that they combat other forms of oppression and injustice We often think of combating injustice overseas but we can combat a very real and dangerous injustice in our own neighborhoods After more than a decade of working with tens of thousands of students teachers parents and pastors Coughlin knows that bullying represents the worst in human nature but combating it promotes the best Kindness and awareness two buzzwords in today's anti bullying movement will not end bullying on their own They must be activated by courage transforming bystanders into righteous loving protectors of targets When we join this mission of love and justice we will become peacemakers who are blessed and called children of God Matt 5:9 **Embedded System Design on a**

Bruce Goldstein,2010 Because of the ease with which we perceive many

people see perception as something that just happens. However, even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience. These mechanisms are being investigated by researchers and theorists in fields such as psychology, cognitive science, neuroscience, computer science, and philosophy. A few examples of the questions posed by these investigations are: What do infants perceive? How does perception develop? What do perceptual disorders reveal about normal functioning? How can information from one sense such as hearing be affected by information from another sense such as vision? How is the information from all of our senses combined to result in our perception of a coherent environment? What are some practical outcomes of basic research in perception? These are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students, researchers, and professionals in psychology, the cognitive sciences, neuroscience, and related medical disciplines such as neurology and ophthalmology.

Psychology of Learning and Motivation, 1992-11-26. The objective of the series has always been to provide a forum in which leading contributors to an area can write about significant bodies of research in which they are involved. The operating procedure has been to invite contributions from interesting active investigators and then allow them essentially free rein to present their perspectives on important research problems. The result of such invitations over the past two decades has been collections of papers which consist of thoughtful integrations providing an overview of a particular scientific problem. The series has an excellent tradition of high quality papers and is widely read by researchers in cognitive and experimental psychology. The volume presents research ranging from classical and instrumental conditioning to complex learning and problem solving. Topics covered fall within a wide range of disciplines from neuroscience to artificial intelligence.

Engineering Psychology and Human Performance, Christopher D. Wickens, William S. Helton, Justin G. Hollands, Simon Banbury, 2021-09-27. Forming connections between human performance and design: this new edition of *Engineering Psychology and Human Performance* examines human-machine interaction. The book is organized directly from a psychological perspective of human information processing, and chapters correspond to the flow of information as it is processed by a human being from the senses through the brain to action, rather than from the perspective of system components or engineering design concepts. Upon completing this book, readers will be able to identify how human ability contributes to the design of technology, understand the connections within human information processing and human performance, challenge the way they think about technology's influence on human performance, and show how theoretical advances have been or might be applied to improving human-machine interactions. This new edition includes the following key features: A new chapter on research methods; Sections on interruption management and distracted driving as cogent examples of applications of engineering psychology theory to societal problems; A greatly increased number of references to pandemics, technostress, and misinformation; New applications; Amplified emphasis on readability and commonsense examples; Updated and new references throughout the text. This book is ideal for psychology and engineering students as well as
