The Internet of Animals Martin Wikelski, 2024-05-14 An illuminating account of animal migration and the stunning new science that reveals their infinite untapped knowledge A loving ode to science itself told with wit and wonder Thor Hanson author of *Hurricane Lizards* and *Plastic Squid* What do animals know that we don't How do elephants detect tsunamis before they happen How do birds predict hurricanes In *The Internet of Animals* renowned scientist Martin Wikelski convincingly argues that animals possess a unique sixth sense that humans are only beginning to grasp All we need to do is give animals a voice and our perception of the world could change forever That's what author Martin Wikelski and his team of scientists believe and this book shares their story for the first time As they tag animals around the world with minuscule tracking devices they link their movements to The International Space Station which taps into the internet of animals an astonishing network of information made up of thousands of animals communicating with each other and their environments Called the International Cooperation for Animal Research Using Space or ICARUS this phenomenal project is poised to change our world Down on the ground Wikelski describes animals sixth sense first hand Farm animals become restless when earthquakes are imminent Animals on the African plains sense when poachers are on the move Frigatebirds in South America depart before hurricanes arrive As Wikelski shows animal migratory rhythms are not triggered by genes encoded in their DNA as previously thought but by elaborate cultures that are long established What does this mean for humans It means that by paying attention to animal cultures we can learn more about our environments We can better prepare for natural disasters such as earthquakes floods and hurricanes Most of all we can learn to live alongside animals in harmony for the betterment of our future their future and the future of the planet
