Philosophical Problems of Space and Time Adolf Grünbaum, 2012-12-06 It is ten years since Adolf Grünbaum published the first edition of this book It was promptly recognized to be one of the few major works in the philosophy of the natural sciences of this generation In part this is so because Grünbaum has chosen a problem basic both to philosophy and to the natural sciences the nature of space and time and in part this is so because he so admirably exemplifies that Aristotelian devotion to the intimate and mutual dependence of actual science and philosophical understanding More than this however the quality of his work derives from his achievement in combining detail with scope The problems of space and time have been among the most difficult in contemporary and classical thought and Grünbaum has been responsible to the full depth and complexity of these difficulties This revised and enlarged second edition is a work in progress in the tradition of reflective analysis of modern science of such figures as Ehrenfest and Reichenbach In publishing this work among the Boston Studies in the Philosophy of Science we hope to contribute to and encourage that broad tradition of natural philosophy which is marked by the close collaboration of philosophers and scientists To this end we have published the proceedings of our Colloquia of meetings and conferences here and abroad as well as the works of single authors

Moses Mendelssohn's Metaphysics and Aesthetics Reinier Munk, 2011-10-20 This book presents an extended dialogue in essay form between specialists in the work of Moses Mendelssohn and experts in important trends in related late seventeenth and eighteenth century thought The first group of contributors explores themes in Mendelssohn's metaphysics and aesthetics presenting both their internal argumentative coherence and their historical context The second outlines the

context of Mendelssohn's views on specific topics and describes his contribution to the discussion of them. The essays are organized in four sections. The first pairs two essays on Mendelssohn's theory of language and writing. The second section offers three essays addressing a number of topics in Mathematics and philosophy in Mendelssohn. A group of eight essays follows dealing with Metaphysics in a historical context. The fourth section presents five essays discussing Mendelssohn's Aesthetics in a historical context. Moses Mendelssohn's Metaphysics and Aesthetics arises from a conference held in Amsterdam in 2009 which gathered numerous authorities to address the central theme. Taken together these eighteen essays present a sophisticated portrait of Mendelssohn packed with detail and rich in complexity.

Dieses Lehrbuch behandelt präzise und ausführlich die klassische Elektrodynamik wie sie für das Physik Studium erforderlich ist. Es beginnt mit einer detaillierten Beschreibung der Maxwell Gleichungen so dass die Grundlagen für die verschiedenen Anwendungsgebiete geschaffen sind. Elektro und Magnetostatik im Vakuum und in Materie und die Strahlung elektromagnetischer Wellen. Gerade der dynamischen Theorie der Röntgenstrahlung und der speziellen Relativitätstheorie wird dabei ein längerer Abschnitt eingeräumt. Zudem schließt das Werk in vielen Bereichen eine Brücke zu den entsprechenden Fragestellungen der Festkörperphysik. Die Herleitung einiger Formeln sowie weitere Fragestellungen finden sich am Ende eines jeden Kapitels in den Übungsaufgaben deren Lösungen online zugänglich sind. Im Anhang findet sich eine umfangreiche Zusammenfassung der notwendigen mathematischen Grundlagen. Als besondere Neuerung sind in der vorliegenden dritten Auflage alle Formeln so gehalten dass sie für das SI Gauß und Heaviside Lorentz System gleichermaßen gelten. Das erleichtert den Wechsel zwischen den Systemen und ermöglicht ein Verständnis dafür wo und wie die Einheitensysteme eingreifen. Aus dem Inhalt: Die Maxwell'schen Feldgleichungen, Ruhende Ladungsverteilungen auf Leitern, Randwertprobleme in der Elektrostatik, Magnetostatik im Vakuum, Elektromagnetische Vorgänge in Materie, Elektrostatik in Materie, Magnetostatik in Materie, Felder von bewegten Ladungen, Quasistationäre Ströme, Elektromagnetische Wellen, Röntgenstreuung, Spezielle Relativitätstheorie, Kovariante Elektrodynamik, Relativistische Mechanik.
