Metal Ions In Biological Systems Carcinogenicity And Metal Ions:

Metal Ions in Biological Systems: Carcinogenicity and metal ions Helmut Sigel, 1973 **Systems, V.10** Helmut Sigel, 1973 Carcinogenicity and Metal Ions Helmut Sigel, 1980 **Environmental Health Perspectives**, 1993 Metal Ions in Biological Systems Helmut Sigel, 1980-07-01 Metallothioneins and Related Chelators Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2009 Chapters 3 to 5 give an account of bacterial MTs MTs in yeast and fungi and MTs in plants Most astonishingly the MTs of bacteria and plants contain next to cysteine also histidine residues and thus metal ions are not only sulfur but also imidazole coordinated which gives rise to zinc finger like structures Remarkably yeast and fungal MTs are Cu I rather than Zn II or Cd II binding proteins Next Chapters 6 through 9 discuss the MTs of dipteran insects including the model organism *Drosophila melanogaster* earthworms and nematodes as well as echinoderms crustaceans molluscs and fish Actually aquatic animals both vertebrates and invertebrates have the potential to be used for monitoring metal contamination in aquatic ecosystems Interestingly in Chapter 9 the remarkable speculation is presented that under chronic natural exposure conditions the animals establish a trade off between the cost of detoxifying non essential metals and the cost of allowing some of these metals to spill over onto metal sensitive sites This contrasts with laboratory experiments involving aquatic animals where the toxicity of non essential metals normally exhibits a threshold response at low exposure concentrations the organisms can detoxify the incoming metal and thus tolerate the exposure whereas at concentrations above the threshold the detoxification mechanism is no longer able to protect the organism completely *Metal Ions in Biological Systems* Astrid Sigel, 2018-05-04 Continues the tradition of excellence established in previous volumes in this acclaimed series Volume 36 focuses on the vibrant research area concerning the interrelation between free radicals and metal ions and their resulting effects on life processes it offers an authoritative and timely account of this fascinating area of research in 21 chapters *Essential Metals in Medicine: Therapeutic Use and Toxicity of Metal Ions in the Clinic* Peggy L. Carver, 2019-01-14 Volume 19 entitled *Essential Metals in Medicine Therapeutic Use and Toxicity of Metal Ions in the Clinic* of the series *Metal Ions in Life Sciences* centers on the role of metal ions in clinical medicine Metal ions are tightly regulated in human health while essential to life they can be toxic as well Following an introductory chapter briefly discussing several important metal related drugs and diseases and a chapter about drug development the focus is first on iron its essentiality for pathogens and humans as well as its toxicity Chelation therapy is addressed in the context of thalassemia its relationship to neurodegenerative diseases and also the risks connected with iron administration are pointed out A subject of intense debate is the essentiality of chromium and vanadium For example chromium III compounds are taken as a nutritional supplement by athletes and bodybuilders in contrast chromate Cr VI is toxic and a carcinogen for humans The beneficial and toxic effects of manganese cobalt and copper on humans are discussed The need for antiparasitic agents is emphasized as well as the clinical aspects of metal

containing antidotes for cyanide poisoning In addition to the essential and possibly essential ones also other metal ions play important roles in human health causing harm like the metalloid arsenic lead or cadmium or being used in diagnosis or treatment of human diseases like gadolinium gallium lithium gold silver or platinum The impact of this vibrant research area on metals in the clinic is provided in 14 stimulating chapters written by internationally recognized experts from the Americas Europe and China and is manifested by approximately 2000 references and about 90 illustrations and tables Essential Metals in Medicine Therapeutic Use and Toxicity of Metal Ions in the Clinic is an essential resource for scientists working in the wide range from pharmacology enzymology material sciences analytical organic and inorganic biochemistry all the way through to medicine not forgetting that it also provides excellent information for teaching

Metal Ions in Bio-Imaging Techniques Astrid Sigel, Eva Freisinger, Roland K.O. Sigel, 2021-03-08 Volume 22 entitled Metal Ions in Bio Imaging Techniques of the series Metal Ions in Life Sciences deals with metal ions as tools in imaging This dates back to the first half of the past century when barium sulfate was orally given to patients undergoing X ray examination The use of contrast agents has since developed into a large interdisciplinary field encompassing not only medicine but also chemistry material sciences physics biology engineering and computer sciences MILS 22 provides deep and current insights in 17 stimulating chapters on the new research frontiers of this fast growing field on bio imaging and beyond For example adding bio sensing yields theranostic agents meaning diagnosis and therapy linked in the same molecule ions of Gd Mn Fe Co Ir ^{99m}Tc etc are involved Other important topics are e g metal complexes in paramagnetic Chemical Exchange Transfer paraCEST radiometals for Positron Emission Tomography PET imaging or paramagnetic metal ion probes for ¹⁹F magnetic resonance imaging MILS 22 is written by 57 internationally recognized experts from 12 countries that is from the US via Europe to China The impact of this vibrant research area is manifested by more than 2300 references and nearly 120 figures mostly in color and several informative tables To conclude Metal Ions in Bio Imaging Techniques is an essential resource for scientists working in the wide range from material sciences enzymology analytic organic and inorganic biochemistry all the way through to medicine including the clinic not forgetting that also excellent information for teaching is provided

Metal Ions in Toxicology Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2011 It is an old wisdom that metals are indispensable for life Indeed several of them like sodium potassium and calcium are easily discovered in living matter However the role of metals and their impact on life remained largely hidden until inorganic chemistry and coordination chemistry experienced a pronounced revival in the 1950s The experimental and theoretical tools created in this period and their application to biochemical problems led to the development of the field or discipline now known as Bioinorganic Chemistry Inorganic Biochemistry or more recently also often addressed as Biological Inorganic Chemistry By 1970 Bioinorganic Chemistry was established and further promoted by the book series Metal Ions in Biological Systems founded in 1973 edited by H S who was soon joined by A S and published by Marcel Dekker Inc New York for more than 30 years After this company ceased to be a

family endeavor and its acquisition by another company we decided after having edited 44 volumes of the MIBS series the last two together with R K O S to launch a new and broader minded series to cover today's needs in the Life Sciences Therefore the Sigels new series is entitled Metal Ions in Life Sciences After publication of the first four volumes 2006 2008 with John Wiley a most experienced Publisher in the Sciences Neurodegenerative Diseases and Metal Ions Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2006-07-11 About the Series Metal Ions in Life Sciences links coordination chemistry and biochemistry in their widest sense and thus increases our understanding of the relationship between the chemistry of metals and life processes The series reflects the interdisciplinary nature of Biological Inorganic Chemistry and coordinates the efforts of scientists in fields like biochemistry inorganic chemistry coordination chemistry molecular and structural biology enzymology environmental chemistry physiology toxicology biophysics pharmacy and medicine Consequently the volumes are an essential source for researchers active in these and related fields as well as teachers preparing courses e.g. in Bioinorganic Chemistry About this Book Volume 1 devoted solely to the vital research area concerning the role of metal ions in neurodegenerative diseases offers in 15 stimulating chapters an authoritative and timely view of this fascinating subject Written by 41 internationally recognized experts Neurodegenerative Diseases and Metal Ions highlights supported by 130 illustrations the recent progress made in understanding the role metal ions play in diseases like transmissible spongiform encephalopathies Creutzfeldt Jakob and related diseases Alzheimer's Parkinson's Huntington's Wilson's and Menkes diseases as well as in familial amyotrophic lateral sclerosis and others The interplay between metal ions catecholamines and the formation of reactive oxygen species resulting in oxidative stress is considered as is the metalloneurochemistry of zinc and the neurotoxicity of aluminum cadmium lead and mercury The need for novel drugs which manipulate metal centered neuropathology is emphasized **Metal Ions in Toxicology: Effects, Interactions, Interdependencies** Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2015-07-24 Volume 8 solely devoted to the toxicology of metals and metalloids as well as their compounds focuses on human health Not surprisingly all related research areas are rapidly developing due to the role of metals and metalloids in the environment for the work place for food and water supply etc Written by 40 internationally recognized experts the 14 stimulating chapters provide an authoritative and timely resource for scientists working in the wide range from analytical physical inorganic and environmental biochemistry all the way through to toxicology physiology and medicine Volume 8 highlights supported by nearly 1900 references in a comprehensive and timely manner the principles of risk assessment regarding the effects of metals on human health It examines how metal ions and their compounds affect the pulmonary cardiovascular gastrointestinal including liver hematological immune and neurological systems the kidney skin and eyes as well as human reproduction and development MILS 8 terminates with the role of metal ions as endocrine disrupters in genotoxicity and cancer risk Cytotoxic, Mutagenic and Carcinogenic Potential of Heavy Metals Related to Human Environment N. Hadjiliadis, 2012-12-06 Environmental pollution is one of the main problems to

confront humanity with the heavy metals occupying a leading role among the most pernicious pollutants. The metals cause cancer and other sicknesses. Their cytotoxic, mutagenic and carcinogenic potentials are not fully understood and any thorough investigation demands the combined efforts of scientists drawn from many different disciplines. But the effects of heavy metals are not all negative; some like cis-DDP and some ruthenium and tin complexes have antitumour activity. The idea underlying the present work is therefore to present a multidisciplinary perspective on heavy metals in the environment, affording a better understanding of their action on human organisms and health, aiming to make them less polluting and more environmentally friendly.

Interrelations between Essential Metal Ions and Human Diseases Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2014-01-27. MILS 13 provides an up-to-date review on the relationships between essential metals and human diseases, covering 13 metals and 3 metalloids. The bulk metals sodium, potassium, magnesium and calcium, plus the trace elements manganese, iron, cobalt, copper, zinc, molybdenum and selenium, all of which are essential for life. Also covered are chromium, vanadium, nickel, silicon and arsenic, which have been proposed as being essential for humans in the 2nd half of the last century. However, if at all, they are needed only in ultra-trace amounts and because of their prevalence in the environment, it has been difficult to prove whether or not they are required. In any case, all these elements are toxic in higher concentrations and therefore transport and cellular concentrations of at least the essential ones are tightly controlled, hence their homeostasis and role for life, including deficiency or overload and their links to illnesses including cancer and neurological disorders, are thoroughly discussed. Indeed, it is an old wisdom that metals are indispensable for life. Therefore, Volume 13 provides in an authoritative and timely manner, in 16 stimulating chapters written by 29 internationally recognized experts from 7 nations and supported by more than 2750 references and over 20 tables and 80 illustrations, many in color, a most up-to-date view on the vibrant research area of the Interrelations between Essential Metal Ions and Human Diseases.

Carcinogenic and Mutagenic Metal Compounds 2 Ernest Merian, 1988. **Molecular Mechanisms of Metal Toxicity and Carcinogenesis** Xianglin Shi, Vince Castranova, Val Vallyathan, William G. Perry, 2012-12-06. During the last two decades, chemical and cellular studies have contributed enormously to our understanding of metal-induced carcinogenesis and many hypotheses on the role of metals in pathophysiological processes have been investigated. In addition, new techniques are available to shed light on the mechanism of carcinogenesis in molecular terms. This conference on Molecular Mechanisms of Metal Toxicity and Carcinogenesis in September 2000 focused on the latest research in molecular mechanisms of metal-induced toxicity and carcinogenesis. The conference promoted a multidisciplinary investigative approach and included presentations from international experts on state-of-the-art information in this field.

Interplay between Metal Ions and Nucleic Acids Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2012-01-02. Interplay between Metal Ions and Nucleic Acids provides in an authoritative and timely manner, in 12 stimulating chapters written by 24 internationally recognized experts from 8 nations and supported by nearly 1500 references, about 20 tables and 125

illustrations many in color a most up to date view on metal ion nucleic acid interactions the characterization of which is covered in solution and in the solid state The volume concentrates on modern developments encompassing topics in the wide range from G quadruplexes via DNAzymes catalysis at the DNA scaffold and metal mediated base pairs to peptide nucleic acids PNAs being thus of relevance e g for chemistry and nanotechnology but also for molecular biology and genetic diagnostics *Structural and Catalytic Roles of Metal Ions in RNA* Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2015-07-24

The discovery of ribozymes nearly 30 years ago triggered a huge interest in the chemistry and biology of RNAs Much of the recently made progress focusing on metal ions is addressed in MILS 9 This book written by 28 internationally recognized experts from 8 nations provides a most up to date view and is thus of special relevance for colleagues teaching courses in biological inorganic chemistry and for researchers dealing e g with nucleic acids gene expression and enzymology but also for those in analytical and bioinorganic chemistry or biophysics *Structural and Catalytic Roles of Metal Ions in RNA* describes in an authoritative and timely manner in 12 stimulating chapters supported by nearly 1600 references 13 tables and 75 illustrations mostly in color metal ion binding motifs methods to detect and characterize metal ion binding sites and the role of metal ions in folding and catalysis It deals with diffuse metal ion binding RNA quadruplexes the regulation of riboswitches metal ions and ribozymes including artificial ribozymes The spliceosome the ribosome ribozymes involving redox cofactors as well as the binding of kinetically inert metal ions to RNA are also covered **Carcinogenic and Mutagenic Metal Compounds 3** Ernest Merian, Giorgio L. Bronzetti, Werner Haerdi, 1991
