Structural Dynamic Analysis with Generalized Damping Models

Sondipon Adhikari,2013-12-11 Since Lord Rayleigh introduced the idea of viscous damping in his classic work The Theory of Sound in 1877 it has become standard practice to use this approach in dynamics covering a wide range of applications from aerospace to civil engineering However in the majority of practical cases this approach is adopted more for mathematical convenience than for modeling the physics of vibration damping Over the past decade extensive research has been undertaken on more general non viscous damping models and vibration of non viscously damped systems This book along with a related book Structural Dynamic Analysis with Generalized Damping Models Identification is the first comprehensive study to cover vibration problems with general non viscous damping The author draws on his considerable research experience to produce a text covering dynamics of viscously damped systems non viscously damped single and multi degree of freedom systems linear systems with non local and non viscous damping reduced computational methods for damped systems and finally a method for dealing with general asymmetric systems The book is written from a vibration theory standpoint with numerous worked examples which are relevant across a wide range of mechanical aerospace and structural engineering applications

Robust Control of Uncertain Dynamic Systems Rama K. Yedavalli, 2013-12-05 This textbook aims to provide a clear understanding of the various tools of analysis and design for robust stability and performance of uncertain dynamic systems In model based control design and analysis mathematical models can never completely represent the real world system that is being modeled and thus it is imperative to incorporate and accommodate a level of uncertainty into the models This book directly addresses these issues from a deterministic uncertainty viewpoint and focuses on the interval parameter characterization of uncertain systems Various tools of analysis and design are presented in a consolidated manner This volume fills a current gap in published works by explicitly addressing the subject of control of dynamic systems from linear state space framework namely using a time domain matrix theory based approach This book also Presents and formulates the robustness problem in a linear state space model framework Illustrates various systems level methodologies with examples and applications drawn from aerospace electrical and mechanical engineering Provides connections between lyapunov based matrix approach and the transfer function based polynomial approaches Robust Control of Uncertain Dynamic Systems A Linear State Space Approach is an ideal book for first year graduate students taking a course in robust control in aerospace mechanical or electrical engineering

Analysis and Synthesis of Dynamical Systems with Time-Delays Yuanqing Xia, Mengyin Fu, Peng Shi, 2009-10-06 Time delay occurs in many dynamical systems such as biological systems chemical systems metallurgical processing systems nuclear reactor long transmission lines in pneumatic hydraulic systems and electrical networks Especially in recent years time delay which exists in networked control systems has brought more complex problem into a new research area Frequently it is a source of the generation of oscillation instability and poor performance Considerable effort has been applied to different aspects of linear time delay systems during recent years Because the introduction of the delay factor renders the system analysis more complicated in addition to the difficulties caused by the perturbation or uncertainties in the control of time delay systems the problems of robust stability and robust stabilization are of great importance This book presents some basic theories of stability and stabilization of systems with time delay which are related to the main results in this book More attention will be paid on synthesis of systems with time delay That is sliding mode control of systems with time delay networked control systems with time delay networked data fusion with random delay
