Organ Transplantation United States. Task Force on Organ Transplantation, 1986 Questions & Answers about Organ Transplantation, 1992 **Life and Hope** Mark A. Greene, 2011-01-14 At the age of eleven Mark Greene nearly died Neither he nor his parents knew that Mark suffered from end stage renal disease he would need a kidney transplant to survive Now more than twenty six years after his successful transplant operation Greene tells the story of his survival following that operation Currently there are approximately 170 000 organ transplant recipients in the United States each with unique stories but sharing the commonality of improved quality of life In *Life and Hope* Greene discusses important principles that will not only contribute to the longevity of organ transplants but also help recipients continue to improve their overall well being He blends personal experience and academic research to both teach and enlighten in a way that brings meaning to organ transplantation Greene shares a very personal story about his ordeal with a misdiagnosed illness that nearly took his life and nearly destroyed his family His story is one of transformation as he moves from the brink of death to a life full of meaning a unique story and real life experience that demonstrates how the organ transplant experience so eloquently contributes to the human experience **The Origins of Organ Transplantation** Thomas Schlich, 2010 This book investigates a crucial but forgotten episode in the history of medicine In it Thomas Schlich systematically documents and analyzes the earliest clinical and experimental organ transplant surgeries In so doing he lays open the historical origins of modern transplantation offering a new and original analysis of its conceptual basis within a broader historical context This first comprehensive account of the birth of modern transplant medicine examines how doctors and scientists between 1880 and 1930 developed the technology and rationale for performing surgical organ replacement within the epistemological and social context of experimental university medicine The clinical application of organ replacement however met with formidable obstacles even as the procedure became more widely recognized Schlich highlights various attempts to overcome these obstacles including immunological explanations and new technologies of immune suppression and documents the changes in surgical technique and research standards that led to the temporary abandonment of organ transplantation by the 1930s Thomas Schlich is professor and Canada Research Chair in the History of Medicine at McGill University **Organ Donation and Transplantation After Cardiac Death** David Talbot, Anthony D'Alessandro, Paolo Muiesan, 2009-03-12 This book describes the different uses of donors of organs after cardiac death around the world based on different laws and logistical issues around the world Developments have allowed these programmes to flourish such that in 2006 25% of UK kidney transplants were from such donors *Organ Donation in Japan*, Maria-Keiko Yasuoka, 2015-04-16 *Organ Donation in Japan A Medical Anthropological Study* by Maria Keiko Yasuoka reveals insight into Japan as the country with the most severe organ shortages and the lowest numbers of organ donations among medically advanced countries The history of organ transplantation in Japan is a unique and troubled one Many academic hypotheses such as cultural barriers the Japanese

concept of the dead body traditional beliefs and so on have been advanced to explain the situation However little research has yet revealed the truth behind the world of Japanese organ transplantation Yasuoka conducts direct interview research with Japanese concerned parties in regards to organ transplantation including transplant surgeons recipients and donor families In this book she analyzes their narrative responses considering their distinctive ideas interpretations and dilemmas and sheds light on the real reasons behind the issues Organ Donation in Japan is the first book to delve into the challenging and taboo Japanese concepts of life and death surrounding organ transplantation by thoroughly presenting and investigating the narratives of concerned parties Rebuilding the Body Ann Fullick,2009-01-01 Delves inside the human body to show how our major organs and specialized cells work what happens when they don't and how they can be replaced Publisher

Transplantation David Price, 2017-05-15 Organ transplantation has been one of the miracles of modern day medicine but in addition to presenting enormous technical and clinical challenges it throws up major ethical and legal issues principally from the perspective of the donor Evolving capabilities in the spheres of both organ and tissue transplantation coupled with rapidly escalating demand assert consistent and critical pressure on our ethical and legal principles and frameworks including the expansion of the potential donor pool beyond the conventional categories of donor This volume brings together seminal papers analyzing such matters in the context of an ever increasingly important area of clinical practice **Organ Transplantation** Frank P. Stuart, Michael M. Abecassis, Dixon B. The Political Economy of Organ Transplantation Hagai Boas, 2022-09-09 This thought provoking work examines how the relationships of organs tissues and cells transferred from one body to another through donation sale or gift are mediated by the state market and family The book is a thorough review of the sociological anthropological and ethical literature surrounding transplant organs but encased within the author's own personal dilemmas and lived experience His work skillfully underscores the negotiations and accommodations inherent in the use of these technologies and reveals the situatedness of decisions that belie any simplistic readings of the ethics of transplantations This is a stimulating and accessible book for those with an interest in transplantation ethics or the social implications of medical technologies Its strength lies in the reflexive accounts from the author of his own experience juxtaposed with the sensitive appraisals of the workings of the state market and family in the organ economy Andrea Whittaker Monash University reviewed for Social Forces This innovative work combines a rigorous academic analysis of the political economy of organ supply for transplantation with autobiographical narratives that illuminate the complex experience of being an organ recipient Organs for transplantations come from two sources living or post mortem organ donations These sources set different routes of movement from one body to another Postmortem organ donations are mainly sourced and allocated by state agencies while living organ donations are the result of informal relations between donor and recipient Each route traverses different social institutions determines discrete interaction between donor and recipient and is charged with moral meanings that can be competing and contrasting The political economy of organs for transplants is the gamut of these routes and their interconnections and this book suggests how such a political economy looks like what are its features and contours its negotiation of the roles of the state market and the family in procuring organs for transplantations and its ultimate moral justifications Drawing on Boas personal experiences of waiting searching and obtaining organs each autobiographical section of the book sheds light on a different aspect of the discussed political economy of organs post mortem donations parental donation and organ market and illustrates the experience of living with the fear of rejection and the intimidation of chronic shortage A Political Economy of Organ Transplantation is of interest to students and academics with an interest in bioethics

sociology of health and illness medical anthropology and science and technology studies *Legal and Ethical Aspects of Organ Transplantation* David Price, 2000-11-30 Organ transplantation raises singularly difficult ethical and legal issues in its requirement for donated organs Strategies to facilitate supply in the face of increasing demand must be ethically sound and subject to an appropriate and effective regulatory framework Professor David Price reviews the ethical principles and positions underpinning such law and policies probing for coherence consistency and justification The book incorporates a comprehensive analysis of existing laws and policies governing transplantation practices around the world It examines the meaning of death cadaver organ procurement policies use of living donors trading in human organs experimental transplant procedures and xenotransplantation Drawing upon a wide range of disciplinary and empirical materials Price explores the balance between the interests of donors recipients clinicians and society identifying the specific challenges of this subject and seeking to guide current practices and future developments in the context of cultural diversity and pluralistic societies
