A Guide to Cultural Landscape Reports Robert R. Page, Cathy Gilbert, Susan Dolan, 1998 **Riparian Landscapes** George Patrick Malanson, 1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography *Japanese Landscapes* Cotton Mather, P.P. Karan, Shigeru Iijima, This revised and updated edition identifies the cultural factors and specific administrative agendas that have shaped the way we view ballistic missile technology Three new sections connect our recent sudden shifts in foreign policy to ongoing historical patterns Whether cautioning against the almost neurotic pursuit of absolute security or examining the powerful influence of religion on military buildup Ernest J Yanarella uncovers the deeply ingrained attitudes that will determine the future of American missile defense

Landscape Forestry Stephen G. Boyce, 1995-02-20 A compilation of concepts biological relationships and procedures used to organize forested landscapes for combinations of goods services and effects Includes such management processes as investments for biological diversity timber production wilderness effects recreational opportunities esthetic values and habitats for endangered animals and plants **Evaluating Indices that Measure Departure of Current Landscape Composition from Historical Conditions** Robert E.

Keane, 2011 A measure of the degree of departure of a landscape from its range of historical conditions can provide a means for prioritizing and planning areas for restoration treatments There are few statistics or indices that provide a quantitative context for measuring departure across landscapes This study evaluated a set of five similarity indices commonly used in vegetation community ecology Sorenson s Index Chord Distance Morisita s Index Euclidean Distance and Similarity Ratio for application in estimating landscape departure where departure 1 similarity This involved comparing composition vegetation type by area of a set of reference landscapes to the compositions of 1 000 simulated historical landscapes Stochastic

simulation modeling was used to create a diverse set of synthetic reference and historical landscapes for departure index evaluation Five reference landscapes were created to represent various degrees of expected departure from historical conditions Both reference and historical landscapes were created to contain four important factors that could potentially influence departure calculation 1 number of classes defining landscape composition 2 dominance of the classes 3 variability of area with the classes and 4 temporal autocorrelation We found that most evaluated indices are useful but not optimal for calculating departure The Sorenson s Index appeared to perform the best with consistent and precise behavior across the ranges of the four treatments The number of classes used to describe vegetation had the strongest influence on index performance landscape composition defined by few classes had the least accurate most imprecise and most highly variable departure estimates While results from this study show the utility of similarity indices in evaluating departure it is also evident that a new set of statistics are needed to provide a more comprehensive analysis of departure for future applications
