Origin Of Values

B. R. THAKUR, HARI KISHAN

Origin Of Values:

The Origin of Values Raymond Boudon, 2001 Values have always been a central topic in both philosophy and the social sciences. Statements about what is good or bad, fair or unfair, legitimate or illegitimate, express clear beliefs about human existence. The fact that values differ from culture to culture and century to century opens many questions. In *The Origin of Values*, Raymond Boudon offers empirical data based analysis of existing theories about values while developing his own perspective as to why people accept or reject value statements. Boudon classifies the main theories of value including those based on firm belief, social or biological factors, and rational or utilitarian attitudes. He discusses the popular and widely influential Rational Choice Model and critiques the postmodernist approach. Boudon investigates why relativism has become so powerful and contrasts it with the naturalism represented by the work of James Q. Wilson on moral sensibility. He follows with a constructive attempt to develop a new theory beginning with Weber's idea of non-instrumental rationality as the basis for a more complex idea of rationality. Applying Boudon's own and existing theories of value to political issues and social ideas, the end of apartheid, the death penalty, multiculturalism, communitarianism. *The Origin of Values* is a significant work. Boudon fulfills a major task of social science: explanation of collective belief. His book will be of interest to sociologists, philosophers, psychologists, and political scientists. Provided by publisher.

The Origin of Values Michael Hechter, Lynn Nadel, Richard E. Michod, 1993-01-01. Although values play a leading role in nearly every explanatory theory in the broad realm of the social and behavioral sciences, very little multidisciplinary research material on values is available. Addressing this need, the editors bring together distinguished social scientists, psychologists, and biologists who collaboratively explore fundamental questions about values: What are the determinants of social values, taboos, and ideologies? What are the determinants of individual values? What is the nature of motivations and rewards? Is there an evolutionary basis for the development of values?

The Origin of Values Raymond Boudon, 2001. Values have always been a central topic in both philosophy and the social sciences. Statements about what is good or bad, fair or unfair, legitimate or illegitimate, express axiomatic beliefs about human existence. The fact that values differ from culture to culture and century to century opens many questions for the student of values: How can differences be explained? Can some values be accepted as true and others false? Can the question of validity be ignored in favor of identification of the causes of belief? Thinkers from Adam Smith, Nietzsche, Durkheim, and Weber to John Rawls and Jürgen Habermas have developed theories rooted in economics, psychology, or biology to explain why people endorse or reject certain value statements. In *The Origin of Values*, Raymond Boudon offers empirical data based analysis of existing theories about values while developing his own general perspective as to why people accept or reject value statements. Boudon classifies the main theories of value including those based on firm belief, social or biological factors, and rational or utilitarian attitudes. He discusses the popular and widely influential Rational Choice Model, critiques the postmodernist approach which sees all values as the emanation of singular cultures. Boudon
