Origins Richard E. Leakey, Roger Lewin, 1977 What new discoveries reveal about the emergence of our species and its possible future

The Mysterious Origins of Hybrid Man Susan B. Martinez, 2013-11-02 A provocative challenge to Darwin's theory of evolution Shows there is no missing link because the human race since day one is the result of outright interbreeding among highly diverse types Reveals multiple Gardens of Eden and how each continent has its own independent hominid lineages Explains Homo sapiens mental powers the Great Leap Forward and how we acquired the blood of the gods which endowed us with a soul Did we evolve from apes or are we all descendants of Adam and Eve Why is the missing link still missing Is the dumb luck of natural selection valid Piecing together the protohistory of humanity through anthropology genetics paleolinguistics and indigenous traditions Susan B Martinez offers an entirely original alternative to Darwin's evolution Modern humanity did not evolve but is a mosaic of mixed ancestry the result of eons of cross breeding and retro breeding among different groups including Cro Magnon Neanderthal hobbits giants and Africa's Lucy and Zinj Martinez shows that there were multiple Gardens of Eden and how each continent had its own blend of races prior to the Great Flood which caused the diaspora that brought a renaissance of culture to every division of the Earth Martinez explains Homo sapiens mental powers the Great Leap Forward in cosmological terms how we are the product of both heaven and earth She identifies the Sons of Heaven and the angel engendered races explaining how Homo sapiens acquired the blood of the gods which endowed us with a soul Providing the ultimate resolution to the Evolution versus Creationism debate this landmark study of hybrid man justifies his unexpectedly sudden appearance in the fossil record the curious parallels between oral histories of the world's people and why anatomically modern features are found in the earliest paleontological evidence

Affective Neuroscience Jaak Panksepp, 2004-09-30 Some investigators have argued that emotions especially animal emotions are illusory concepts outside the realm of scientific inquiry However with advances in neurobiology and neuroscience researchers are demonstrating that this position is wrong as they move closer to a lasting understanding of the biology and psychology of emotion In Affective Neuroscience Jaak Panksepp provides the most up to date information about the brain operating systems that organize the fundamental emotional tendencies of all mammals Presenting complex material in a readable manner the book offers a comprehensive summary of the fundamental neural sources of human and animal feelings as well as a conceptual framework for studying emotional systems of the brain Panksepp approaches emotions from the perspective of basic emotion theory but does not fail to address the complex issues raised by constructionist approaches These issues include relations to human consciousness and the psychiatric implications of this knowledge The book includes chapters on sleep and arousal pleasure and fear systems the sources of rage and anger and the neural control of sexuality as well as the more subtle emotions related to maternal care social loss and playfulness Representing a synthetic integration of vast amounts of neurobehavioral knowledge including relevant neuroanatomy neurophysiology and neurochemistry this book

will be one of the most important contributions to understanding the biology of emotions since Darwins The Expression of the Emotions in Man and Animals

The Heart of Listening, Volume 1 Hugh Milne,1998-06-18 Originally published as a single volume The Heart of Listening has been re issued as two separate volumes because of public demand for a more concise portable edition Milne a third generation Scottish osteopath begins by explaining the visionary approach to healing and how it may be applied to the realm of craniosacral work He explains the importance of meditation centering and the cultivation of heartfulness in the development of compassionate practice Milne introduces the reader to the story of visionary work its genesis evolution philosophy and practice and explains how a grounding in meditation sensitive touch and intuitive perception can lead to a remarkable unfoldment in skill development

Darwin's Walk and The Last Wave Richard Krooth,2017-08-30 This book describes the reasons humankind may be facing its last moments on Planet Earth Darwin marked the path of species evolution modification and extinction Following Darwin s trajectory of evolution the author reveals how human made technologies have had a devastating impact on Earth s biosphere signaling the continuing disappearance of landscapes and the decline of species life

Lost Kingdom: Animal Death in the Anthropocene Wendy A. Wiseman,Burak Kesgin,2024-03-12 The authors in Lost Kingdom grapple with both the catastrophe of mass animal extinction in which the panoply of earthly life is in the accelerating process of disappearing and with the mass death of industrial animal agriculture Both forms of anthropogenic violence against animals cast the Anthropocene as an era of criminality and loss driven by boundless human exceptionalism forcing a reckoning with and an urgent reimagining of human animal relations Without the sleights of hand that would lump humanity into a singular Anthropos of the Anthropocene the authors recognize the differential nature of human impacts on animal life and the biosphere as a whole while affirming the complexity of animal worlds and their profound imbrications in human cultures societies and industries Confronting the reality of the Sixth Mass Extinction and mass animal death requires forms of narrativity that draw on traditional genres and disciplines while signaling a radical break with modern temporalities and norms Chapters in this volume reflect this challenge while embodying the interdisciplinary nature of inquiry into non human animality at the edge of the abyss historiography cultural anthropology post colonial studies literary criticism critical animal studies ethics religious studies Anthropocene studies and extinction studies entwined to illuminate what is arguably the greatest crisis for all creatures in the past 65 million years

Multisensory Human Kathy L. Callahan,2005-04 An anthropologist connects the recent explosion of interest in intuition regression therapy and near death experiences to our very evolution as a species in this rich interesting read Dr Kathy Callahan explains that we are in the middle of an extremely important stage of our growth as human beings As a species we are reaching new heights in our awareness that we are more than just bodies walking the earth we are immortal souls The transformation is so profound that Dr Callahan proposes a new subspecies Homo sapiens intueri This name refers to our quickly expanding ability to acquire a deeper more personal knowledge Using information from current anthropology the Edgar Cayce material the Bible and many other sources the author traces our creation and development as whole beings and then proposes what is in store for us next as a species

Species of Origins Karl W. Giberson,Donald A. Yerxa,2002-10-09 In Species of Origins Karl W Giberson and Donald A Yerxa examine America s controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo Christian religions

Human Remains Helen Patricia MacDonald,2006-01-01 Until 1832 when an Act of Parliament began to regulate the use of bodies for anatomy in Britain public dissection was regularlyand legallycarried out on the bodies of murderers and a shortage of cadavers gave rise to the infamous murders committed by Burke and Hare to supply dissection subjects to Dr Robert Knox the anatomist This book tells the scandalous story of how medical men obtained the corpses upon which they worked before the use of human remains was regulated Helen MacDonald looks particularly at the activities of British surgeons in nineteenth century Van Diemens Land a penal colony in which a ready supply of bodies was available Not only convicted murderers but also Aborigines and the unfortunate poor who died in hospitals were routinely

turned over to the surgeons This sensitive but searing account shows how abuses happen even within the conventions adopted by civilized societies It reveals how from Burke and Hare to today's televised dissections by German anatomist Dr Gunther von Hagens some people's bodies become other people's entertainment

The Case Against Women Raising Children Kathleen A. Ryan Carlsson, 2002-03-08 For information about the book go to www.GroenendaelPress.com Evolution and culture produce a body and mind to suit a creature's role in the world Whether care of the young is provided by males, females or both each species has evolved caregiver traits suited to that task The result is caring women and provider men In other words you are what you do However with the honing of each trait a creature pays a price In the case of a woman who specialized her body and mind to childcare the price was a failure to develop skill at financial self sufficiency and individual direction which in turn made it more likely that such a woman will live in a subordinate relationship Women as primary parents perpetuated gender roles Women internalized this definition of themselves and they became somewhat comfortable with it Even when they wanted more power over their lives they found themselves trapped from within But human beings have also evolved the trait of educability We can learn We can choose the direction in which we develop our abilities and traits The case against women raising children is the case for parents raising children

Human Prehistory in Fiction Charles De Paolo, 2015-09-11 What was the world like for people thousands of years ago How can we know Through fiction This is a work of literary criticism and more It begins with a discussion of the problem of authenticity and then considers twelve pieces of fiction that depict human prehistory H G Wells The Island of Doctor Moreau Pierre Boulle's The Planet of the Apes Jules Verne's The Village in the Treetops Edgar Rice Burroughs The Land That Time Forgot the struggle for legitimacy in Wells The Grisly Folk the Tasmanian analogue in Lester Del Rey's The Day Is Done William Golding's The Inheritors the promise of humanity in Arthur C Clarke's 2001 A Space Odyssey the theme of a god among the heathen in Wells The Lord of the Dynamos and other works Jean Auel's The Clan of the Cave Bear J H Rosny Aine's Quest for Fire and Wells The Time Machine An Invention A final chapter considers the paleoanthropologist as literary critic

The Extraordinary Story of Human Origins Piero Angela, 1993-06 How can we know about the lives of our ancestors who lived 30 000 or 300 000 or 3 million years ago In The Extraordinary Story of Human Origins Piero and Alberto Angela address the many difficulties and challenges that scientists face in assembling the record of human evolution To piece together the intriguing puzzle of human origins it is necessary to study all clues that are made available by multidisciplinary research including paleontology biochemistry geology genetics physics and climatology Like so many Sherlock Holmeses researchers seek all possible clues and analyze them meticulously in hopes of being able to reconstruct the past These pieces are few and fragmentary ranging from the footprints left in volcanic ash 3.7 million years ago by hominids who walked exactly as we do to a Y pattern on molars and mitochondrial DNA But they all provide information on the diet diseases hunting techniques and art of Australopithecus Homo habilis Homo erectus the Neanderthal and the first Homo sapiens sapiens Written in an accessible

but authoritative style this study includes many lively reconstructions of the everyday life of our earliest ancestors based on the most reliable data The Extraordinary Story of Human Origins makes available to a wide audience a unique look inside the exciting world of research into the the beginnings of human life on earth *Michael Osborn on Metaphor and Style* Michael Osborn,2018-07-01 This volume features two dimensions of Michael Osborn s work with rhetorical metaphor The first focuses on his early efforts to develop a conception of metaphor to advance the understanding of rhetoric while the second concerns more recent efforts to apply this enriched conception in the analysis and criticism of significant rhetorical practice The older emphasis features four of Osborn s more prominent published essays revealing the personal context in which they were generated their strengths and shortcomings and how they may have inspired the work of others His more recent unpublished work analyzes patterns of metaphor in the major speeches of Demosthenes the evolution of metaphors of illness and cure in speeches across several millennia the exploitation of the birth death rebirth metaphor in Riefenstahl s masterpiece of Nazi propaganda Triumph of the Will and the contrasting forms of spatial imagery in the speeches of Edmund Burke and Barack Obama and what these contrasts may portend **Science and the Dao** Livia Kohn,2016 *What a Piece of Work* Helen Oppenheimer,2016-10-17 This is a small book on a large subject What is special about human beings Hamlet mused What a piece of work is man How noble in reason how like a god but went on to speak of this quintessence of dust Helen Oppenheimer prefers to start with the dust and move to the glory we really are animals and from these animals has come Shakespeare People are indeed miserable sinners and also magnificent creatures The author does not disguise that she is a Christian theologian whose subject is ethics but she writes equally for non Christians Her invitation to the reader is Here is a way of looking at things that I find exciting and convincing I hope you do too Heart of Listening Hugh Milne,1998 This deluxe hardcover editions contains both Volume I and II of The Heart of Listening Milne a third generation Scottish osteopath begins by explaining the visionary approach to healing and how it may be applied to the realm of craniosacral work He explains the importance of meditation centering and the cultivation of heartfulness in the development of compassionate practice Milne introduces the reader to the story of visionary work its genesis evolution philosophy and practice and explains how a grounding in meditation sensitive touch and intuitive perception can lead to a remarkable unfoldment in skill development In the second volume Milne details the anatomy physiology energetics and techniques that are the essential core of visionary craniosacral work His particular genius lies in his ability to weave a delicate tapestry of narrative poetry and scientific fact into a fascinating and insightful exposition of the visionary healing arts **Ontohackers: Radical Movement Philosophy in the Age of Extinctions and Algorithms, Part II** Jaym*/Jaime del Val,2025-05-27 Ontohackers redefines what movement worlds and bodies are through the sense of proprioception reconceptualized as formless fluctuation field a movement matrix that is itself also thought and which underlies all life forms and fields including the inorganic Our worlds are made of endless such entangled fields n folding in neverending variation or enference The current

planetary crisis has emerged due to an accidental evolutionary alignment narrowing and impoverishment of that matrix's indeterminacy that appeared gradually and eventually with bipedalism and which created an imbalance between the larger proprioceptive field and its brain and made the atrophied body extend itself technically in geometric fields gradually covering the planet along with its fears with disastrous consequences that are unleashing an unprecedented type of mass extinction and species suicide. The reply to this crisis which is urgently due if we are to reduce even slightly the collapse coming up over the next decades is in recovering a lost sensorimotor plasticity which is also cognitive affective and relational plasticity through developing movement techniques for cultivating Body Intelligence BI reversing and taking elsewhere the failed evolution culminating in AI stepping down from humanist supremacist pedestals undoing our dependency upon unsustainable killing machines of sedentary consumerism that impoverish experience stopping the reproduction of a species that has become plague by reversing heteronormative reproductive dogmas till we reach preagricultural population levels and recovering the joys of moving with the world in symbiotic mutation towards unprecedented evolutionary variations this is our cosmic responsibility for all life on Earth. The book's structure expresses Enfranchisement Theory with regard to how processes of becoming have a triple movement an incipience unfolding the field Part I a condensation expansion where the field acquires full consistency Part II and a resonance or memory of the field relating to other fields Part III Part II subtitled Revolution Technologies includes Books 4 5 and 6 and is by far the longest volume elaborating in depth the book's proposals in a triple movement. It first exposes the technologies of variation in nature Book 4 followed by the technologies of reduction in the Algorithmic Book 5 and finally the possibilities for overcoming the reductive fold Book 6. Book 4 proposes a swarming chaomology as theory of organic evolution culminating in the concept of metabiosis life as indeterminate symbiotic mutation. Book 5 diagnoses the regimes that have formatted movement and presents the theory of the Algorithmic or Age of Extinctions and Algorithms. It exposes a kinetic ontology genealogy and dynamics of power. An interlude discusses post trans and metahumanism and a second part of the book unfolds a radical critique of the Planetary Holocaust. Book 6 unfolds metaformance aesthetics and metahuman politics including the theory of metaformativity the ontohacking pragmatics and a choral Dionysian ontology where the author also discusses at length his own techniques and art projects involving a radical challenge to human supremacism to face the extinction challenge now threatening all life on Earth toward an Earth liberation and regeneration.
