Origins Of Human Nature And Human Behavior:

The Primate Origins of Human Nature Carel P. Van Schaik, 2016-01-26 The Primate Origins of Human Nature Volume 3 in The Foundations of Human Biology series blends several elements from evolutionary biology as applied to primate behavioral ecology and primate psychology classical physical anthropology and evolutionary psychology of humans However unlike similar books it strives to define the human species relative to our living and extinct relatives and thus highlights uniquely derived human features The book features a truly multi disciplinary multi theory and comparative species approach to subjects not usually presented in textbooks focused on humans such as the evolution of culture life history parenting and social organization

Evolution and Human Behavior John Cartwright, 2000 The book covers fundamental issues such as the origins and function of sexual reproduction mating behavior human mate choice patterns of violence in families altruistic behavior the evolution of brain size and the origins of language the modular mind and the relationship between genes and culture

The Biological Roots of Human Nature Timothy H. Goldsmith, 1994 In this stimulating book Goldsmith argues that biology has a great deal to say that should be of interest to social scientists historians philosophers and humanists in general He believes that anyone studying the social behavior of humans must take into consideration both proximate cause the physiology biochemistry and social mechanisms of behavior and ultimate cause how the behavior came to exist in evolutionary time Goldsmith a neurobiologist draws examples from neurobiology psychology and ethology behavioral evolution The result is a work that overcomes many of the misconceptions that have hindered the rich contributions the biological sciences have to offer concerning the evolution of human society behavior and sense of identity Among the key topics addressed are the nature of biological explanation the relationship between genes and behavior those aspects of behavior most likely to respond to natural selection the relationship between evolution and learning and some probable modes of interaction between cultural and biological evolution By re examining the role of biological explanation in the domain of social development the author has significantly advanced a more well rounded view of human evolution and shed

new light on the perennial question of what it means to be human His book will appeal to biologists social scientists traditional humanists and interested general readers

The Origins of Human Nature David F. Bjorklund, Anthony D. Pellegrini, 2002 The origins of human nature offers readers the first book length attempt to define the field of evolutionary developmental psychology the application of the principle of natural selection to explain contemporary human development The authors point out that an evolutionary developmental perspective allows one to view gene environment interactions the significance of individual differences and the role of behavior and development in evolution in much greater depth The authors also focus on how an evolutionary perspective can foster a better understanding of human development and how developmental processes may have influenced the course of human evolution Of particular interest are chapters that explore factors influencing parenting and other aspects of family life the role of play and the interacting roles of an extended juvenile period a big brain and a complex social structure in human cognitive evolution The authors present a hybrid approach to evolution and development pointing out that though underlying assumptions held by evolutionary and developmental psychologists have been at odds each field has much to offer the other

Hirst,1975 **Reading Human Nature** Joseph Carroll,2011-03-01 As the founder and leading practitioner of literary Darwinism Joseph Carroll remains at the forefront of a major movement in literary studies Signaling key new developments in this approach Reading Human Nature contains trenchant theoretical essays innovative empirical research sweeping surveys of intellectual history and sophisticated interpretations of specific literary works including The Picture of Dorian Gray Wuthering Heights The Mayor of Casterbridge and Hamlet Evolutionists in the social sciences have succeeded in delineating basic motives but have given far too little attention to the imagination Carroll makes a compelling case that literary Darwinism is not just another school or movement in literary theory It is the moving force in a fundamental paradigm change in the humanities a revolution Psychologists and anthropologists have provided massive evidence that human motives and emotions are rooted in human biology Since motives and emotions enter into all the products of a human imagination humanists now urgently need to assimilate a modern scientific understanding of human nature Integrating evolutionary social science with literary humanism Carroll offers a more complete and adequate understanding of human nature
