Principles Of Mechanistic Biology:

The Principles of Mechanistic Biology Theodore Horace Savory,1971 **Biocivilisations** Predrag Slijepcevic,2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth The Wholeness Principle Anna F. Lemkow,1990-01-01 New technology industry and commerce have spawned the global interdependency of all people making us our brothers keepers by necessity asserts author Anna Lemkow in this exciting demonstration of the reality of Wholeness as a universal principle She offers integrative approaches to religion philosophy science and world affairs that can help shape a bright future Concepts of Air Force Leadership ,1970 *Emergence or Reduction?* Ansgar Beckermann,Hans Flohr,Jaegwon Kim,2011-07-20 No detailed description available for *Emergence or Reduction* *Perception and the Inhuman Gaze* Anya Daly,Fred Cummins,James Jardine,Dermot Moran,2020-06-03 The diverse essays in this volume speak to the relevance of phenomenological and psychological questioning regarding perceptions of the human This designation human can be used beyond the mere identification of a species to underwrite exclusion denigration dehumanization and demonization and to set up a pervasive opposition in Othering all deemed inhuman nonhuman or posthuman As alerted to by Merleau Ponty one crucial key for a deeper understanding of these issues is consideration of the nature and scope of perception Perception defines the world of the perceiver and perceptual capacities are constituted in engagement with the world there is co determination Moreover the distinct phenomenology of perception in the spectatorial mode in contrast to the reciprocal mode deepens the intersubjective and ethical dimensions of

such investigations Questions motivating the essays include Can objectification and an inhuman gaze serve positive ends If so under what constraints and conditions How is an inhuman gaze achieved and at what cost How might the emerging insights of the role of perception into our interdependencies and essential sociality from various domains challenge not only theoretical frameworks but also the practices and institutions of science medicine psychiatry and justice What can we learn from atypical social cognition psychopathology and animal cognition Could distortions within the gazer's emotional responsiveness and habituated aspects of social interaction play a role in the emergence of an inhuman gaze Perception and the Inhuman Gaze will interest scholars and advanced students working in phenomenology philosophy of mind psychology psychiatry sociology and social cognition

Modern Materialism and Emergent Evolution William

McDougall, 2016-02-12 Originally published in 1929 McDougall examines the pertinent conflict between religion and science His work exhibits the failure of scientists to explain human action mechanistically the essence of modern materialism establishes purposive action as a type of event radically different from all mechanistic events and justifies the belief in teleological causation without which there can be neither religion nor morals This title will be of interest to students of both the Humanities and Sciences particularly those studying psychology and philosophy
