Petrochemical Economics Duncan Seddon, 2010 This compendium gives an overview of the technologies and economics in the production of olefins in the petrochemical industries It highlights the

options and costs for producing olefins using different technologies and different feedstocks at a time when the cost of carbon dioxide emissions are set to be included in the production cost Industry professionals engineers research scientists and financiers will find this title a valuable resource Supercomputer Algorithms for Reactivity, Dynamics and Kinetics of Small Molecules Antonio Laganà, 2012-12-06 The need for accurate computational procedures to evaluate detailed properties of gas phase chemical reactions is evident when one considers the wealth of information provided by laser molecular beam and fast flow experiments By stressing ordinary scalar computers to their limiting performance quantum chemistry codes can already provide sufficiently accurate estimates of the stability of several small molecules and of the reactivity of a few elementary processes However the accurate characterization of a reactive process even for small systems is so demanding in terms of computer resources to make the use of supercomputers having vector and parallel features unavoidable Sometimes to take full advantage from these features all that is needed is a restructure of those parts of the computer code which perform vector and matrix manipulations and a parallel execution of its independent tasks More often a deeper restructure has to be carried out This may involve the problem of choosing a suitable computational strategy or the more radical alternative of changing the theoretical treatment There are cases in fact where theoretical approaches found to be inefficient on a scalar computer exhibit their full computational strength on a supercomputer *Novel Production Methods for Ethylene, Light Hydrocarbons, and Aromatics* Lyle Albright, 1991-09-25 **ARO and AFOSR Contractors Meeting in Chemical Propulsion, Held in Virginia Beach, Virginia on 3-6 June 1996** David M. Mittal, 2016-04-19 The premier symposium on Surfactants in Tribology held in Seoul in 2006 was an enormously successful event that generated a high level of interest in the topic leading to the publication of the first volume in this series in 2008 The tremendous response was echoed at the follow up symposium in Berlin that same year and leading researchers man **Thermal and Catalytic Processes in Petroleum Refining** Serge Raseev, 2003-02-26 This text examines the thermal and catalytic processes involved in the refining of petroleum including visbreaking coking pyrolysis catalytic cracking oligomerization alkylation hydrofining hydroisomerization hydrocracking and catalytic reforming It analyzes the

thermodynamics reaction mechanisms and kinetics of each process as well as *Natural Gas Conversion II* H.E. Curry-Hyde, R.F. Howe, 1994-07-15 This Symposium provided the opportunity to review progress after more than 10 years of research and development in the field of natural gas conversion Oxidative coupling of methane as a route to higher value fuels or feedstock was a major part of the program The advances in understanding of reaction mechanisms and catalyst structure were discussed in a Plenary paper and in many of the contributed papers The homogeneous gas phase chemistry involved in methane oxidation is relevant not only to oxidative coupling but also to synthesis gas and methanol production via partial oxidation This field is reviewed in a Plenary paper and contributed papers describe developments in catalysts and technology for partial oxidation to synthesis gas and to methanol An alternative route to synthesis gas from methane currently receiving attention is carbon dioxide reforming This technology is reviewed in a Plenary paper and recent advances are described in contributed papers The first detailed account of the Shell SMDS Fischer Tropsch process for production of transport fuels from natural gas recently commercialised in Malaysia is given in this book Papers discuss structural aspects of Fischer Tropsch catalysts modifications of Fischer Tropsch catalysts to produce light olefins and the possibilities of operating a Fischer Tropsch process off shore Methanol as an intermediate in natural gas conversion continues to attract attention and methanol synthesis and conversion are discussed in contributed papers The possibilities of finding new uses for methane are treated in a Plenary paper and arguments for using methane as a fuel rather than a feedstock are also presented Among the new uses of methane considered are the generation of electricity in fuel cells and the use of methane as a reductant for NO_x emissions The papers will be of interest to scientists and engineers working in the field of gas conversion transportation fuels primary petrochemicals and catalysis

Thermal Modeling in Sedimentary Basins Jean Burrus, 1986 *Gas-Phase Thermal Reactions* Guy-Marie Côme, 2013-03-14 This book is devoted to Gas Phase Thermal Reactions GPTRs and especially combustion reactions which take place in engines burners and industrial chemical reactors to produce mechanical or thermal energy to incinerate pollutants or to manufacture chemical substances and which play an important part due to the consequences they have on the environment fires and explosions tropospheric pollution greenhouse effect hole in the stratospheric ozone layer The design and running of engines burners incinerators industrial reactors both economical in fuels raw materials and energy efficient safe and clean as well as the scientific evaluation of the causes and the effects of atmospheric pollutions with a view to taking rational environmental decisions which necessitate an understanding of the fundamental mechanisms of these reactions and an access to models allowing numerical simulations of the phenomena being studied to be carried out The analysis of the results of the simulations then allows an optimal solution to be found to the industrial problem or to extrapolate the natural phenomena
