research on the services and protocols for networks providing the communication support for distributed multimedia applications. The need for end-to-end QoS for these multimedia applications is raising the stakes for a powerful shaping and scheduling in the network adapter. It is also creating a need for new services at the ATM layer, CBR and VBR being augmented by UBR, ABR and GFR which have to be evaluated in the TCP/IP environment of today and tomorrow. With the pressure of all the new technologies available today, the backbone architecture needs to be revisited and the success of the TCP/IP must not eliminate the possibility of adding a native ATM access to it. Most of the research in communication services such as IntServ, DiffServ and Native ATM is driven by the requirements of multimedia systems and this book illustrates the new emphasis by bringing telecommunication and computer communication experts together with application designers. This is particularly true for the security issues also addressed here. Last but not least, modeling techniques and mathematical models are essential to assess the performance of the networks to be built and to evaluate next century scenarios unachievable by a simple scaling of today's solutions.

High Performance Networks for Multimedia Applications is a collection of high quality research papers and the in-depth treatment of the subjects provides interesting and innovative solutions. It is an essential reference for telecommunication and computer experts and QoS-based application designers. It is also a comprehensive text for graduate students in high performance networks and multimedia applications.

Long-haul and Access Networks, Optical Metro, and WDM A. Lord, D. W. Faulkner, D. W. Smith, 2001. This volume contains the proceedings of the NOC 2001 at Adastral Park, UK, June 26-29, 2001. With about 70 papers, this book highlights the gigabit ethernet, PON developments and other work on standard broadband PONs such as dynamic bandwidth assignment. There are 10 papers on optical packet switching and work on optical cross connects and DWDM for long haul systems is presented.

Information Networks and Data Communication Finn Arve Aagesen, Harald Botnevik, Dipak Khakhar, 2016-01-09. Teleservice is a common concept for distributed application services related to the use of telecommunication equipment. PCs, workstations and mainframes. Teleservices represent a diversity of applications related to various user and vendor cultures such as traditional telecommunications services, E-mail services, cooperative work applications, multimedia applications, mobile services and intelligent network services. The complexity and diversity of teleservices are increasing but of greater importance is the change in the way in which teleservices are designed, delivered and maintained.

Information Network and Data Communications captures the cultural as well as the technical variety of teleservice.

Tantawy,2013-06-05 It is always confusing and perhaps inconvenient at times using generic terms that will mean something

to everyone but different things to different people High Performance is one of those terms High Performance can be viewed as synonymous to High Speed or Low Latency or a number of other characteristics The interesting thing is that such ambiguity can sometimes be useful in a world where focus shifts quite easily from one issue to another as times and needs evolve Many things have changed since the first HPN conference held in Aachen Germany in 1987 The focus then was mainly on Media Access Control MAC protocols that allow users to share the high bandwidth of optical fiber FDDI Fiber Distributed Data Interface was making its debut with its amazing 100 Mbps speed ATM Asynchronous Transfer Mode and SONET the Synchronous Optical Network were beginning to capture our imagination What could users possibly do with such high performance Share it After realizing that the real problems had gradually shifted away from the network media to the periphery of the network focus also began to shift Adapter design protocol implementation and communication systems architecture began to attract our interest Networking not Networks became the hot issue
