Quality Of Care For Cardiopulmonary Conditions:

Quality of Care for Cardiopulmonary Conditions Elizabeth A. McGlynn, 2000 This report is one of five volumes providing detailed information on the QA Tools RAND's comprehensive clinically based system for assessing quality of care for children and adults. The QA Tools indicators encompass screening, diagnosis, treatment, and follow up in 46 clinical areas and cover a variety of modes of providing care including history, physical examination, laboratory study, medication, and other interventions and contacts. Development of each indicator was based on the ratings of a panel of experts in the relevant fields and on a focused review of the scientific literature which is clearly documented for each clinical condition. This volume focuses on indicators for care of cardiopulmonary conditions. Each chapter summarizes the results of the literature review for a particular condition, provides RAND staff's recommended indicators based on that review, and notes the level of scientific evidence supporting each indicator along with the relevant citations. In addition, this work details the process by which the expert panel evaluated the indicators and the final disposition of each indicator. Clinical conditions covered in this volume are Asthma, atrial fibrillation, cerebrovascular disease, chronic obstructive pulmonary disease, cigarette counseling, community-acquired pneumonia, coronary artery disease, heart failure, hyperlipidemia, hypertension, upper respiratory infections. Other RAND Health titles on the QA Tools system focus on indicators for general medicine, oncology, and HIV, children and adolescents, and women.

Envisioning the National Health Care Quality Report Institute of Medicine, Board on Health Care Services, Committee on the National Quality Report on Health Care Delivery, 2001-04-22 How good is the quality of health care in the United States? Is quality improving? Or is it suffering? While the average person on the street can follow the state of the economy with economic indicators, we do not have a tool that allows us to track trends in health care quality. Beginning in 2003, the Agency for Healthcare Research and Quality (AHRQ) will produce an annual report on the national trends in the quality of health care delivery in the United States. AHRQ commissioned the Institute of Medicine (IOM) to help develop a vision for this report that will allow national and state policy makers, providers, consumers, and the public at large to track trends in health care quality. *Envisioning the National Health Care Quality Report* offers a framework for health care quality, specific examples of the types of measures that should be included in the report, suggestions on the criteria for selecting measures, as well as advice on reaching the intended audiences. Its recommendations could help the national health care quality report to become a mainstay of our nation's effort to improve health care.
