Positron Emission Tomography Balázs Gulyás, Hans W. Müller-Gärtner, 2012-12-06 A critical summary of the state of the art of PET technology and related disciplines camera physics radiochemistry radiopharmacology computerised brain atlases and databases etc plus a survey of the most recent developments in the clinical and neuroscience applications of PET The chapters systematically guide the reader from the basics of the technique including new camera designs new drugs and new statistical and image processing approaches through its most important clinical applications in neurology psychiatry and oncology to the most sophisticated neuroscience applications including research into human sensory and motor systems the functional organisation of imagery volition attention and consciousness in the human brain *Quantitative Analysis in Nuclear Medicine Imaging* Habib Zaidi, 2006-07-11 This book provides a review of image analysis techniques as they are applied in the field of diagnostic and therapeutic nuclear medicine Driven in part by the remarkable sophistication of nuclear medicine instrumentation and crease in computing power and its ready and inexpensive availability this is a relatively new yet rapidly expanding field Likewise although the use of nuclear imaging for diagnosis and therapy has origins dating back almost to the pioneering work of Dr G de Hevesy quantitative imaging has only recently emerged as a promising approach for

diagnosis and therapy of many diseases An effort has therefore been made to place the reviews provided in this book in a broader context The effort to do this is reflected by the inclusion of introductory chapters that address basic principles of nuclear medicine instrumentation and dual modality imaging followed by overview of issues that are closely related to quantitative nuclear imaging and its potential role in diagnostic and therapeutic applications A brief overview of each chapter is provided below Chapter 1 presents a general overview of nuclear medicine imaging physics and instrumentation including planar scintigraphy single photon emission computed tomography SPECT and positron emission tomography PET Nowadays patients diagnosis and therapy is rarely done without the use of imaging technology As such imaging considerations are incorporated in almost every chapter of the book The development of dual modality aging systems is an emerging research field which is addressed in chapter 2
