Ammann, Stefanie Dannenmann, Laurent Vulliet, 2006-08-17 Over the last two decades there has been an increase in the number of natural hazards which have culminated in catastrophic consequences severely impacting on people and livelihoods In response to this escalation the Swiss Natural Hazards Competence Centre CENAT organized a workshop entitled RISK21 at the Centro Stefano Franscini Mon Misconceptions of Risk Terje Aven, 2011-08-15 We all face risks in a variety of ways as individuals businesses and societies The discipline of risk assessment and risk management is growing rapidly and there is an enormous drive for the implementation of risk assessment methods and risk management in organizations There are great expectations that these tools provide suitable frameworks for obtaining high levels of performance and balance different concerns such as safety and costs The analysis and management of risk are not straightforward There are many challenges The risk discipline is young and there are a number of ideas perspectives and conceptions of risk out there For example many analysts and researchers consider it appropriate to base their risk management policies on the use of expected values which basically means that potential losses are multiplied with their associated consequences However the rationale for such a policy is questionable A number of such common conceptions of risk are examined in the book related to the risk concept risk assessments uncertainty analyses risk perception the precautionary principle risk management and decision making under uncertainty The Author discusses these concepts their strengths and weaknesses and concludes that they are often better judged as misconceptions of risk than conceptions of risk Key Features Discusses common conceptions of risk with supporting examples Provides recommendations and guidance to risk analysis and risk management Relevant for all types of applications including engineering and business Presents the Author's overall conclusions on the issues addressed throughout the book All those working with risk related problems need to understand the fundamental ideas and concepts of risk Professionals in the field of risk as well as researchers and graduate students will benefit from this book Policy makers and business people will also find this book of interest Cross-Cultural Risk Perception Ortwin Renn, Bernd Rohrmann, 2000-01-31 Cross Cultural Risk Perception demonstrates the richness and wealth of theoretical insights and

Interdisciplinarity in Technology Assessment M. Decker,2001 Technology Assessment processes can be taken as

a paradigm for interdisciplinary research It is expected that interdisciplinary Technology Assessment is able to find solutions for actual sociopolitical problems that go beyond those expectable from one individual scientific discipline alone The common notion that for tasks like this different disciplinary perspectives should be brought together confronts the fact that there is no common notion on how interdisciplinary research should be done In the present volume of the series Wissenschaftsethik und Technikfolgenbeurteilung European experts of Technology Assessment present their perspectives on interdisciplinary research They focus on methodology policy consulting and participation of stakeholders laypersons and citizens or present concrete case studies concerning climate change and health care Each contribution is commented by an other scientist The result is a discussion like examination of the connection between interdisciplinarity and the main subjects of Technology Assessment This makes the book worth reading not only for experts in interdisciplinary research and policy consulting but also for those who are interested in the ongoing discussion about methodology in European Technology Assessment
