Research Stephen Gorard, 2010-07-01 This is a comprehensive guide to quantitative research rooted in the author's own teaching and research In particular it challenges both the student who does not do numbers and the student who does nothing but numbers and who therefore fails to interpret or challenge his/her results The book shows how all educational researchers need to do quantitative research even if only in the sense of reading other people's research findings In fact the book argues that the conventional distinction between primary and secondary research data is inadequate since there is enormous need opportunity for conducting research through using and reinterpreting secondary data This leads to one of the main selling points of the book Gorard's idea of the idle researcher who makes valuable contributions to the research literature by using data gathered by other researchers **Documentary Research**

I have started my postgraduate studies in Educational Management and this book will definitely make things easier. I would like to cordially thank Professor Wallace and Mrs Louise Poulson for this book which will help the majority of the students who enter the labyrinth of postgraduate research and surely need a kind of instruction manual to start. Amazon Review One of the most useful books that I have come across for my students. Professor Les Bell, Director of Doctorate of Education, University of Leicester. Very impressed with the first chapter. Have recommended it to our research department for use with our graduate students. Thorough and practical. Philip Hallinger, Executive Director of the College of Management, Mahidol University, Thailand. This unique book combines the teaching quality of a text with exemplary reports of small scale and larger research studies as well as a literature review by leading academics. Part One shows how to develop as a critical reader and self-critical writer of literature and how to apply these insights in planning a written assignment, dissertation or thesis. The book provides a framework for the critical analysis of any text and shows how to incorporate this in a literature review. Part Two presents accounts of leading edge research offering insights into key issues in the field of educational leadership, management and administration. The reader is invited to practice literature review skills by applying the critical analysis questions to any research report. Readers can use the models of good research practice presented here in their own design of an investigation for a dissertation or thesis. Part Three shows how a high quality literature review may be constructed and addresses a key issue in the field. Contributors include Sharon Kruse, Karen Seashore, Louis Kenneth Leithwood, Phillip Hallinger and Ronald Heck, Derek Glover and Rosalind Levacic, Ray Bolam. This book will be useful to postgraduate students on research-based masters and doctorate courses in educational leadership, management and administration. It is relevant for students doing research training in the social sciences and humanities. It can also be used as a teaching resource by supervisors of masters and doctorate level students. This series, edited by Mike Wallace, supports research-based teaching on masters and taught doctorate courses in the humanities and social sciences fields of enquiry. Wermke, Maija Salokangas, 2021-03-24 What do we mean when we speak about teacher autonomy How free are teachers to go about their work To answer these complex questions the authors asked thousands of teachers in four national contexts in Finland Ireland Germany and Sweden what they think autonomy looks like The resulting book examines teacher autonomy theoretically and empirically comparing teachers perceptions of their professional autonomy Utilizing a mixed method approach the authors combine data from a large scale questionnaire study teacher interviews lesson and meeting observations and workshops that brought together teachers from the four participating countries All this engagement with teachers revealed that simply increasing their professional autonomy might not lead to desired outcomes This is because from a teachers point of view increased decision making capacity brings further complexity and risk to their work and it may instead lead to anxiety self restriction and the eventual rejection of autonomy These surprising conclusions challenge the increasingly orthodox view that increased autonomy is a desirable end in itself This is what the authors call the autonomy paradox **Research Methods and Methodologies in Education** Robert Coe, Michael Waring, Larry V Hedges, James

Students Ruth Mieschbuehler, 2017-07-28 Research into ethnic attainment differences in British higher education and elsewhere tends to depict students from minority ethnic backgrounds as disadvantaged marginalised discriminated against and excluded In *The Minoritisation of Higher Education* Mieschbuehler demonstrates that this idea is shaping theoretical perspectives and informing higher education policies and practice across the country yet current university policies and

practices perpetuate rather than ameliorate the educational status of so called minority ethnic students Including an examination of current theories as well as a wealth of empirical data from students this book explains how group based social differentiation and student centred education foster the idea that ethnic and social attributes matter losing any sense of our common humanity Considering the consequences of this for students and university education as a whole and challenging all pre existing ideas of how to approach reported ethnic attainment gaps The Minoritisation of Higher Education is a thought provoking read The book will be of great interest to scholars postgraduate students and professionals in the areas of higher education learning and teaching equality and diversity ethnicity and attainment It is also an important work for policymakers concerned with higher education
