**An Introduction to Neuroendocrinology** Richard E. Brown, 1994-01-27 This book is designed as an introductory text in neuroendocrinology the study of the interaction between the brain and endocrine system and the influence of this on behaviour The endocrine glands pituitary gland and hypothalamus and their interactions and hormones are discussed The action of steroid and thyroid hormone receptors and the regulation of target cell response to hormones is examined The function of neuropeptides is discussed with respect to the neuroendocrine system and behaviour The neuroimmune system and lymphokines are described and the interaction between the neuroendocrine and neuroimmune systems discussed Finally methods for studying hormonal influences on behaviour are outlined Each chapter has review and essay questions designed for advanced students and honours or graduate students with a background in neuroscience respectively **Aspects of Neuroendocrinology** W. Computational Neuroendocrinology Duncan J. MacGregor, Gareth Leng, 2016-03-03 Neuroendocrinology with its well defined functions inputs and outputs is one of the most fertile grounds for computational modeling in neuroscience But modeling is often seen as something of a dark art This book aims to display the power of modeling approaches in neuroendocrinology and to showcase its potential for understanding these complex systems A recurring theme in neuroendocrinology is rhythms How are rhythms generated and what purpose do they serve Are these two questions inextricably intertwined This book is written for innocents presuming no math beyond high school or computing beyond calculators It seeks to lead the curious into the thinking of the modeler providing the tools to the reader to understand models and even develop their own giving life to paper diagrams The diverse chapters from ion channels to networks systems and hormonal rhythms each tell the story of a model serving to join the hard won dots of experimentation mapping a new understanding and revealing hidden knowledge Written by a team of internationally renowned researchers Both print and enhanced e book versions are available Illustrated in full colour throughout This is the fourth volume in a new Series Masterclass in Neuroendocrinology a co publication between Wiley and the INF International Neuroendocrine Federation that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology Series Editors John A Russell University of Edinburgh UK and William E Armstrong The University of Tennessee USA Written by a team of internationally renowned researchers Both print and enhanced e book versions are available Illustrated in full colour throughout This is the fourth volume in a new Series Masterclass in Neuroendocrinology a co publication between Wiley and

**Nitric Oxide Synthase: Characterization and Functional Analysis**, 1996-09-18 Although the function of nitric oxide in a regulatory capacity in the central and peripheral nervous system is widely recognized the full scope of its actions and its interrelationships with other classes of regulatory molecules is just beginning to be comprehended This volume contains a number of sophisticated and advanced methods essential for exploring the activity of nitric oxide in the brain It will be a valuable tool for the established investigator and for those just entering the field Comprehensive protocols included for detection of NO and related compounds by chemical immunohistochemical and in situ hybridization techniques Newly developed methods for the purification of neuronal and endothelial NO synthase production of monoclonal antibodies to NO synthase molecular cloning and expression of NO synthesis and control of NO synthase gene expression Assessment of NO mediated functions in neurons central nervous system cerebral circulation synaptic transmission and vascular tone Calcium imaging by confocal microscopy evaluation of the effect of NO on iron metabolism and detection of heme oxygenase 1 and 2 message level and distribution

**The Reproductive Neuroendocrinology of Aging and Drug Abuse** Charles D. Barnes,Dipak K. Sarkar, 1994-11-22 The communication

between the hypothalamus pituitary and gonad is bi directional and alterations of the communication in the circuitry as often occurs during aging and drug abuse results in acyclicity hypogonadism and impotence This important reference covers topics on the neuroendocrine control mechanisms governing the reproductive process in both males and females It discusses the importance of the differentiation of the neuroendocrine brain during the developmental period for the normal reproductive process It also summarizes the effects of prenatal drug abuse on the differentiation of the neuroendocrine brain development and how this alteration induces abnormalities in the reproduction process This comprehensive volume compares the effects of various psychoactive drugs on the maintenance of reproduction and describes the changes in the reproductive neurendocrine axis during aging     **Anatomical Neuroendocrinology** Walter E. **Circulating Regulatory Factors and Neuroendocrine Function** Daniela Jezová,John C. Porter,2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents
