 the World's Renowned Programs , *Infusing Ethics into the Development of Engineers* National Academy of  
 Engineering, Center for Engineering Ethics and Society, Infusing Ethics Selection Committee, 2016-03-17 Ethical practice in  
 engineering is critical for ensuring public trust in the field and in its practitioners especially as engineers increasingly tackle  
 international and socially complex problems that combine technical and ethical challenges This report aims to raise  
 awareness of the variety of exceptional programs and strategies for improving engineers' understanding of ethical and social  
 issues and provides a resource for those who seek to improve ethical development of engineers at their own institutions This  
 publication presents 25 activities and programs that are exemplary in their approach to infusing ethics into the development  
 of engineering students It is intended to serve as a resource for institutions of higher education seeking to enhance their  
 efforts in this area *Evaluating Explanations* David B. Leake, 2014-02-25 Psychology and philosophy have long studied the  
 nature and role of explanation More recently artificial intelligence research has developed promising theories of how  
 explanation facilitates learning and generalization By using explanations to guide learning explanation based methods allow  
 reliable learning of new concepts in complex situations often from observing a single example The author of this volume  
 however argues that explanation based learning research has neglected key issues in explanation construction and  
 evaluation By examining the issues in the context of a story understanding system that explains novel events in news stories  
 the author shows that the standard assumptions do not apply to complex real world domains An alternative theory is  
 presented one that demonstrates that context involving both explainer beliefs and goals is crucial in deciding an explanation's  
 goodness and that a theory of the possible contexts can be used to determine which explanations are appropriate This  
 important view is demonstrated with examples of the performance of ACCEPTER a computer system for story understanding  
 anomaly detection and explanation evaluation **Liberalism and Its Discontents** Francis Fukuyama, 2022-05-10 A short  
 book about the challenges to liberalism from the right and the left by the bestselling author of *The Origins of Political Order*  
 Classical liberalism is in a state of crisis Developed in the wake of Europe's wars over religion and nationalism liberalism is a  
 system for governing diverse societies which is grounded in fundamental principles of equality and the rule of law It  
 emphasizes the rights of individuals to pursue their own forms of happiness free from encroachment by government It's no

secret that liberalism didn't always live up to its own ideals. In America many people were denied equality before the law. Who counted as full human beings worthy of universal rights was contested for centuries and only recently has this circle expanded to include women, African Americans, LGBTQ people and others. Conservatives complain that liberalism empties the common life of meaning. As the renowned political philosopher Francis Fukuyama shows in *Liberalism and Its Discontents*, the principles of liberalism have also in recent decades been pushed to new extremes by both the right and the left. Neoliberals made a cult of economic freedom and progressives focused on identity over human universality as central to their political vision. The result, Fukuyama argues, has been a fracturing of our civil society and an increasing peril to our democracy. In this short, clear account of our current political discontents, Fukuyama offers an essential defense of a revitalized liberalism for the twenty-first century.

Collective Goods and Higher Education Research Roger Benjamin, 2018-09-19. With this volume the author demonstrates how a collective goods approach to higher education research can alleviate problems of rising costs, declining resources, and growing concerns about undergraduate learning. In taking this approach, the author presents new tools of analysis borrowed from cognitive science, economics, data analytics, education technology, and measurement science to investigate higher education's place in society as a public or private good. By showing how these tools can be utilized to reorient current research, this volume offers scholars and policy makers an argument for the large-scale use of scientific and economic approaches to higher education's most pressing issues.

**The Creative Enterprise of Mathematics Teaching Research** Bronislaw Czarnocha, William Baker, Olen Dias, Vrunda Prabhu, 2016-07-28. *The Creative Enterprise of Mathematics Teaching Research* presents the results and methodology of work of the teaching research community of practice of the Bronx TR Team of the Bronx. It has a twofold aim of impacting both teachers of Mathematics and researchers in Mathematics Education. This volume can be used by teachers of mathematics who want to use research to reflect upon and to improve their teaching craft, as well as by researchers who are interested in uncovering riches of classroom learning teaching for research investigations. This book represents the results of a collaboration of instructors discussing their own instruction research analyzed through a conceptual framework obtained via the synthesis of creativity research and educational learning theories based upon the work of Piaget and Vygotsky. The editors see an urgent need for creative synthesis of research and teaching, an example of which is presented in the book. Two central themes of the book are the methodology of TR NYC's model and creativity, more precisely, creativity of the Aha moment formulated by Arthur Koestler in 1964 in a very profound but little-known theory of bisociation exposed in his work *The Act of Creation*. Incorporation of the theory of bisociation into classroom teaching of mathematics provides the key to enable students who may struggle with mathematics to engage their own creativity, become involved in their learning process, and thus reach their full potential of excellence. Creativity in teaching remedial mathematics is teaching gifted students how to access their own giftedness.
