Resilience Assessment and Evaluation of Computing Systems Katinka Wolter, Alberto Avritzer, Marco

Vieira, Aad van Moorsel, 2012-11-02 The resilience of computing systems includes their dependability as well as their fault tolerance and security It defines the ability of a computing system to perform properly in the presence of various kinds of disturbances and to recover from any service degradation These properties are immensely important in a world where many aspects of our daily life depend on the correct reliable and secure operation of often large scale distributed computing systems Wolter and her co editors grouped the 20 chapters from leading researchers into seven parts an introduction and motivating examples modeling techniques model driven prediction measurement and metrics testing techniques case studies and conclusions The core is formed by 12 technical papers which are framed by motivating real world examples and case studies thus illustrating the necessity and the application of the presented methods While the technical chapters are independent of each other and can be read in any order the reader will benefit more from the case studies if he or she reads them together with the related techniques The papers combine topics like modeling benchmarking testing performance evaluation and dependability and aim at academic and industrial researchers in these areas as well as graduate students and lecturers in related fields In this volume they will find a comprehensive overview of the state of the art in a field of continuously growing practical importance     Quantitative Evaluation of Systems Alessandro Abate, Andrea

Marin, 2021-08-19 This book constitutes the proceedings of the 18th International Conference on Quantitative Evaluation Systems QEST 2021 held in Paris France in August 2021 The 21 full papers and 2 short papers presented together with 2 keynote papers were carefully reviewed and selected from 47 submissions The papers are organized in the following topics probabilistic model checking quantitative models and metamodels analysis and validation queueing systems learning and verification simulation performance evaluation abstractions and aggregations and stochastic models     Quantitative
