 Recent years have seen the proliferation of new computer designs that employ parallel processing in one form or another in  
 order to achieve maximum performance Although the idea of improving the performance of computing machines by carrying  
 out parts of the computation concurrently is not new indeed the concept was known to Babbage such machines have until  
 fairly recently been confined to a few specialist research laboratories Nowadays parallel computers are commercially  
 available and they are finding a wide range of applications in chemical calculations The purpose of this volume is to review  
 the impact that the advent of concurrent computation is already having and is likely to have in the future on chemical  
 calculations Although the potential of concurrent computation is still far from its full realization it is already clear that it may  
 turn out to be second in importance only to the introduction of the electronic digital computer itself     **Mathematical  
 Functions and Their Approximations** Yudell L. Luke, 2014-05-10 Mathematical Functions and their Approximations is an  
 updated version of the Applied Mathematics Series 55 Handbook based on the 1954 Conference on Mathematical Tables held  
 at Cambridge Massachusetts The aim of the conference is to determine the need for mathematical tables in view of the  
 availability of high speed computing machinery This work is composed of 14 chapters that cover the machinery for the  
 expansion of the generalized hypergeometric function and other functions in infinite series of Jacobi and Chebyshev  
 polynomials of the first kind Numerical coefficients for Chebyshev expansions of the more common functions are tabulated  
 Other chapters contain polynomial and rational approximations for certain class of G functions the coefficients in the early  
 polynomials of these rational approximations and the Pad approximations for many of the elementary functions and the  
 incomplete gamma functions The remaining chapters describe the development of analytic approximations and expansions

This book will prove useful to mathematicians advance mathematics students and researchers **Modern Optical Spectroscopy** William W. Parson, 2015-06-09 This textbook offers clear explanations of optical spectroscopic phenomena and shows how spectroscopic techniques are used in modern molecular and cellular biophysics and biochemistry The topics covered include electronic and vibrational absorption fluorescence resonance energy transfer exciton interactions circular dichroism coherence and dephasing ultrafast pump probe and photon echo spectroscopy single molecule and fluorescence correlation spectroscopy Raman scattering and multiphoton absorption This revised and updated edition provides expanded discussions of quantum optics metal ligand charge transfer transitions entropy changes during photoexcitation electron transfer from excited molecules normal mode calculations vibrational Stark effects studies of fast processes by resonance energy transfer in single molecules and two dimensional electronic and vibrational spectroscopy The explanations are sufficiently thorough and detailed to be useful for researchers and graduate students and advanced undergraduates in chemistry biochemistry and biophysics They are based on time dependent quantum mechanics but are developed from first principles with a clarity that makes them accessible to readers with little prior training in this field Extra topics and highlights are featured in special boxes throughout the text The author also provides helpful exercises for each chapter

**Walter Gautschi, Volume 1** Claude Brezinski, Ahmed Sameh, 2013-10-22 Walter Gautschi has written extensively on topics ranging from special functions quadrature and orthogonal polynomials to difference and differential equations software implementations and the history of mathematics He is world renowned for his pioneering work in numerical analysis and constructive orthogonal polynomials including a definitive textbook in the former and a monograph in the latter area This three volume set Walter Gautschi Selected Works with Commentaries is a compilation of Gautschi's most influential papers and includes commentaries by leading experts The work begins with a detailed biographical section and ends with a section commemorating Walter's prematurely deceased twin brother This title will appeal to graduate students and researchers in numerical analysis as well as to historians of science Selected Works with Commentaries Vol 1 Numerical Conditioning Special Functions Interpolation and Approximation Selected Works with Commentaries Vol 2 Orthogonal Polynomials on the Real Line Orthogonal Polynomials on the Semicircle Chebyshev Quadrature Kronrod and Other Quadratures Gauss type Quadrature Selected Works with Commentaries Vol 3 Linear Difference Equations Ordinary Differential Equations Software History and Biography Miscellanea Works of Werner Gautschi **Introduction to Nonlinear Differential and Integral**

subject with examples and applications drawn from current industrial and academic research By using the computer to solve problems that include actual experimental data the author is able to cover the subject matter at a practical level The books closely integrate the theoretical chemistry being taught with industrial and laboratory practice This approach enables the student to compare theoretical projections with experimental results thereby providing a realistic grounding for future practicing chemists and engineers Each volume of Physical Chemistry includes Mathematica and Mathcad Workbooks on CD ROM Metiu s four separate volumes Thermodynamics Statistical Mechanics Kinetics and Quantum Mechanics offer built in flexibility by allowing the subject to be covered in any order These textbooks can be used to teach physical chemistry without a computer but the experience is enriched substantially for those students who do learn how to read and write Mathematica or Mathcad programs A TI 89 scientific calculator can be used to solve most of the exercises and problems Technical Abstract Bulletin Defense Documentation Center (U.S.),1961-07 **Reviews in Computational Chemistry, Volume 18** Kenny B.
