field theory for these examples The resulting lecture notes have proved to be exceptionally useful and are still in print In the decade and a half that have lapsed since that time there has been much hard work with the ultimate objective of providing a rigorous mathematical foundation for the quantum field theories in four dimensional space time that summarize a large fraction of our current understanding of elementary particle physics QCD and the electroweak theory The lecture notes of the 1988 school record the fact that although this objective has not been reached Important progress has been made The ultraviolet stability of Yang Mills theory In four dimensions has been treated and renormalizable not superrenormalizable models in two dimensional space time Gross Neveu models have been solved *V.A.
