Alarming! The Chasm Separating Basic Statistics Education from its Necessities William J. Adams, 2013-05-20 The fairly large sample of current basic statistics books I gave thought to recently may in my view be characterized as number pushers with a large number of illustrations intended to convey a sense of the importance of statistics to the study of real world problems What's wrong with that Nothing provided that what I submit to be the necessities of statistics education are given the attention they warrant are not smothered by glitz overwhelming attention to number pushing do not receive shortshrift or are not mentioned at all Am I being too critical I invite you to give thought to fifteen issues questions that are the core of the aforementioned chasm and render your verdict Food for thought in support of the issues questions raised along with answers discussion are included Many students and those who apply statistics to their fields of interest subscribe to the view that to apply statistics to a problem situation all you need do is throw your data into a computer and let it do its thing The further they travel along this road of thought the more we can expect misunderstanding of statistics and when it comes to publication statistical junk I believe that the only way to change the direction of this road of thought is to incorporate into our teaching of basic statistics what is feasible of the necessities of statistics education For further discussion of the necessities of basic statistics education I recommend the book I coauthored with my colleagues Irwin Kabus and Mitchell Preiss Statistics Basic Principles and Applications 2nd ed Kendall Hunt Publishing Co 2000 or the revised 2nd ed W J Adams Xlibris 2009

Other Paradises Jessica Sequeira, 2018-04-27 Why do people choose to play with ideas considered antiquated? Why do they elect to act in non-productive ways? Perhaps the question can be asked in reverse: What comes to mind when we think of technology? That which is practical, efficient, invisible, fast, optimistic, constantly updated. So how can one explain the search for the opposite, that which is useless, inefficient, physically present, slow, dystopian, obsolete, and governed by chance? The matter of what motivates the search for antiquated forms strikes deep into the heart of value. Are people simply following trends? Are they idiots? Are they sentimental? Are they artists? Are they interested in kitsch? Are they uninformed? Are they poets? *Other Paradises* is a collection of essays exploring imaginative responses to science and technology and is about people who choose to build other paradises, fully conscious of the alternative they offer to the dominant paradigm of technological progress.

The Philosophy of Living Nature Zdeněk Kratochvíl, 2016 Zdenek Kratochvil's publication focuses on the approach of the Western philosophical

tradition to physis or nature The scholar reveals on a philosophical level the roots of today's environmental crisis calling his text an attempt to descend to the uncertain and rich lands of nature's experience to the lands of natural experience The introduction presents an etymological explanation of the notion of nature analyzing its aspects The scholar points out that neglecting the appreciation of nature results in harm to the world It is therefore necessary to focus on the world and its plurality as the background for phenomena and the context of things as a unity of horizons as a paradigm for understanding nature However the natural world exists not merely as a philosophical problem but also one concerning real life Kratochvil also explains the categories related to the perception of the world matter space and time Other chapters deal with living nature he asks about the identity of a living organism about the relation of life and being evolution he attempts to provide a description of evolutionary events based on experience analyzes Darwin and neo-Darwinian evolutionism and the epistemological issues of the ability to know the living He discusses the paradigms of the reality while focusing on modern paradigms

Conspiracy and Contingency Thorsten Botz-Bornstein, 2025-05-13 What do conspiracy theories algorithms and meritocracy have in common All three avoid contingency and frantically look for necessities The COVID-19 crisis has brought about a proliferation of conspiracy theories that reject among other things official accounts of the virus's origins and remedies and sometimes even the existence of the virus itself Conspiratorial thinking usually links events to secret plots concocted by powerful conspirators whether it be Bill Gates or Big Pharma In this book I point to another dominant driving force the desire to find simple and apparently reasonable explanations for phenomena that are actually purely random and contingent Often unfounded conspiracy theories emerge because contingency is not accepted and necessities are looked for at all costs Nothing happens by chance and there must be a plan or an intelligent design behind everything This book deals with contingency phobia This special phobia is not only manifest in most unwarranted conspiracy theories but it also appears in Western culture as a recurrent psychological cognitive and scientific pattern It is

the cause of a variety of other phenomena that have become emblematic for liberal democracies such as the contemporary algorithm culture or the obsession with merit and ranking Not only the conspiratorial mindset rejects a world of contingency and strives to create a universe structured by a necessary order life coaches algorithm engineers and neoliberal meritocrats all do the same This book analyses these phenomena by using the same criteria how do humans deal with contingency and how do they try to establish necessities Some philosophies such as Daoism and Zen Buddhism make unwarranted conspiracy theories quasi impossible because they find original ways of combining contingency with ontological theological or cosmological premises I identify sources that other disciplines examining conspiracy theories for example political science anthropology psychology or sociology have rarely seen as primary Political scientists focus on the macro level and construe conspiracy theories mostly as national or regional phenomena whereas anthropologists psychologists and sociologists tend to focus on the micro level The present study is an example of practical philosophy depicting conspiratorial thinking as an organic or a dynamic phenomenon by crystallising cognitive and cultural necessity contingency patterns that can be found in politics culture religion and science

Nationalism and the Moral Psychology of Community Bernard Yack, 2022-12-22 Nationalism is one of modern history's great surprises. How is it that the nation, a relatively old form of community, has risen to such prominence in an era so strongly identified with the individual? Bernard Yack argues that it is the inadequacy of our understanding of community and especially the moral psychology that animates it that has made this question so difficult to answer. Yack develops a broader and more flexible theory of community and shows how to use it in the study of nations and nationalism. What makes nationalism such a powerful and morally problematic force in our lives is the interplay of old feelings of communal loyalty and relatively new beliefs about popular sovereignty. By uncovering this fraught relationship, Yack moves our understanding of nationalism beyond the oft-rehearsed debate between primordialists and modernists: those who exaggerate our loss of individuality and those who underestimate the depth of communal attachments. A brilliant and compelling book, *Nationalism and the Moral Psychology of Community* sets out a revisionist conception of
