Kosorok, Erica E. M. Moodie, 2015-12-08

Personalized medicine is a medical paradigm that emphasizes systematic use of individual patient information to optimize that patient's health care particularly in managing chronic conditions and treating cancer. In the statistical literature sequential decision making is known as an adaptive treatment strategy (ATS) or a dynamic treatment regime (DTR). The field of DTRs emerges at the interface of statistics, machine learning and biomedical science to provide a data driven framework for precision medicine. The authors provide a learning by seeing approach to the development of ATSs aimed at a broad audience of health researchers. All estimation procedures used are described in sufficient heuristic and technical detail so that less quantitative readers can understand the broad principles underlying the approaches. At the same time more quantitative readers can implement these practices. This book provides the most up to date summary of the current state of the statistical research in personalized medicine. Contains chapters by leaders in the area from both the statistics and computer sciences fields and also contains a range of practical advice, introductory and expository materials and case studies. **Decision**

**Making in Neurovascular Disease** Leonardo Rangel-Castilla, Peter Nakaji, Adnan H. Siddiqui, 2018-05-07 Neurovascular medicine has emerged as an established semi independent subspecialty of neurology and neurosurgery. **Finding What Works in Health Care** Institute of Medicine, Board on Health Care Services, Committee on Standards for Systematic Reviews of Comparative Effectiveness Research, 2011-07-20 Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence Systematic reviews identify select assess and synthesize the findings of similar but separate studies and can help clarify what is known and not known about the potential benefits and harms of drugs devices and other healthcare services Systematic reviews can be helpful for clinicians who want to integrate research findings into their daily practices for patients to make well informed choices about their own care for professional medical societies and other organizations that develop clinical practice guidelines Too often systematic reviews are of uncertain or poor quality There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled how evidence is appraised and the overall scientific rigor of the process In Finding What Works in Health Care the Institute of Medicine IOM recommends 21 standards for developing high quality systematic reviews of comparative effectiveness research The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain Finding What Works in Health Care also proposes a framework for improving the quality of the science underpinning systematic reviews This book will serve as a vital resource for both

sponsors and producers of systematic reviews of comparative effectiveness research
