Readings in Distributed Artificial Intelligence Alan H. Bond,Les Gasser,2014-06-05 Most artificial intelligence research investigates intelligent behavior for a single agent solving problems heuristically understanding natural language and so on Distributed Artificial Intelligence DAI is concerned with coordinated intelligent behavior intelligent agents coordinating their knowledge skills and plans to act or solve problems working toward a single goal or toward separate individual goals that interact DAI provides intellectual insights about organization interaction and problem solving among intelligent agents This comprehensive collection of articles shows the breadth and depth of DAI research The selected information is relevant to emerging DAI technologies as well as to practical problems in artificial intelligence distributed computing systems and human computer interaction Readings in Distributed Artificial Intelligence proposes a framework for understanding the problems and possibilities of DAI It divides the study into three realms the natural systems approach emulating strategies and representations people use to coordinate their activities the engineering science perspective building automated coordinated problem solvers for specific applications and a third hybrid approach that is useful in analyzing and developing mixed collections of machines and human agents working together The editors introduce the volume with an important survey of the motivations research and results of work in DAI This historical and conceptual overview combines with chapter introductions to guide the reader through this fascinating field A unique and extensive bibliography is also provided **An Introduction to Artificial Intelligence** Kenneth H. Rose,1985 Readings in Computer Vision Martin A. Fischler,Oscar Firschein,1987-06 The field of computer vision combines techniques from physics

mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume

Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business *Readings in Machine Learning* collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors

Readings in Knowledge Acquisition and Learning Bruce G. Buchanan, David C. Wilkins, 1993 Readings in Knowledge Acquisition and Learning collects the best of the artificial intelligence literature from the fields of machine learning and knowledge acquisition This book brings together the perspectives on constructing knowledge based systems from these two historically separate subfields of artificial intelligence

Machine Learning Ryszard S. Michalski, George Tecuci, 1994-02-09 Multistrategy learning is one of the newest and most promising research directions in the development of machine learning systems The objectives of research in this area are to study trade offs between different learning strategies and to develop learning systems that employ multiple types of inference or computational paradigms in a learning process Multistrategy systems offer significant advantages over monostrategy systems They are more flexible in the type of input they can learn from and the type of knowledge they can acquire As a consequence multistrategy systems have the potential

to be applicable to a wide range of practical problems This volume is the first book in this fast growing field It contains a selection of contributions by leading researchers specializing in this area See below for earlier volumes in the series

Readings in Intelligent User Interfaces Mark Maybury,Wolfgang Wahlster,1998-04 This is a compilation of the classic readings in intelligent user interfaces This text focuses on intelligent knowledge based interfaces combining spoken language natural language processing and multimedia and multimodal processing Machines like Us Ronald J. Brachman,Hector J. Levesque,2023-10-17 How we can create artificial intelligence with broad robust common sense rather than narrow specialized expertise It s sometime in the not so distant future and you send your fully autonomous self driving car to the store to pick up your grocery order The car is endowed with as much capability as an artificial intelligence agent can have programmed to drive better than you do But when the car encounters a traffic light stuck on red it just sits there indefinitely Its obstacle avoidance lane following and route calculation capacities are all irrelevant it fails to act because it lacks the common sense of a human driver who would quickly figure out what s happening and find a workaround In *Machines like Us* Ron Brachman and Hector Levesque both leading experts in AI consider what it would take to create machines with common sense rather than just the specialized expertise of today s AI systems Using the stuck traffic light and other relatable examples Brachman and Levesque offer an accessible account of how common sense might be built into a machine They analyze common sense in humans explain how AI over the years has focused mainly on expertise and suggest ways to endow an AI system with both common sense and effective reasoning Finally they consider the critical issue of how we can trust an autonomous machine to make decisions identifying two fundamental requirements for trustworthy autonomous AI systems having reasons for doing what they do and being able to accept advice Both in the end are dependent on having common sense The Handbook of Artificial Intelligence Avron Barr,Edward A. Feigenbaum,2014-05-12 *The Handbook of Artificial Intelligence* Volume I focuses on the progress in artificial intelligence AI and its increasing applications including parsing grammars and search methods The book first elaborates on AI AI handbook and literature problem representation search methods and sample search programs The text then ponders on representation of knowledge including survey of representation techniques and representation schemes The manuscript explores understanding natural languages as well as machine translation grammars parsing test generation and natural language processing systems The book also takes a look at understanding spoken language including systems architecture and the ARPA SUR projects The text is a valuable source of information for computer science experts and researchers interested in pursuing further research in artificial intelligence

The Metaphysical Nature of the Non-adequacy Claim Carlotta Piscopo,2013-02-01 Over the last two decades the field of artificial intelligence has experienced a separation into two schools that hold opposite opinions on how uncertainty should be treated This separation is the result of a debate that began at the end of the 1960 s when AI first faced the problem of building machines required to make decisions and act in the real world This debate witnessed the contraposition between the mainstream school which relied on probability for handling uncertainty and an alternative school which criticized the

adequacy of probability in AI applications and developed alternative formalisms The debate has focused on the technical aspects of the criticisms raised against probability while neglecting an important element of contrast This element is of an epistemological nature and is therefore exquisitely philosophical In this book the historical context in which the debate on probability developed is presented and the key components of the technical criticisms therein are illustrated By referring to the original texts the epistemological element that has been neglected in the debate is analyzed in detail Through a philosophical analysis of the epistemological element it is argued that this element is metaphysical in Popper's sense It is shown that this element cannot be tested nor possibly disproved on the basis of experience and is therefore extra scientific It is established that a philosophical analysis is now compelling in order to both solve the problematic division that characterizes the uncertainty field and to secure the foundations of the field itself *Intelligent Systems for Engineers and Scientists* Adrian A. Hopgood, 2000-10-11 This updated version of the best selling Knowledge Based Systems for Engineers and Scientists CRC Press 1993 embraces both the explicit knowledge based models retained from the first edition and the implicit numerical models represented by neural networks and optimization algorithms The title change to Intelligent Systems for Engineers and Scie
