Readings in Forest Hydrology Arthur R. Eschner, Peter E. Black, 1975
Eschner, Peter E. Black, 1975 *Forest Hydrology* Devendra Amatya, Thomas Williams, Leon Bren, Carmen de Jong, 2016-09-14 Forests cover approximately 26% of the world's land surface area and represent a distinct biotic community. They interact with water and soil in a variety of ways providing canopy surfaces which trap precipitation and allow evaporation back into the atmosphere thus regulating how much water reaches the forest floor as through fall as well as pull water from the soil for transpiration. The discipline forest hydrology has been developed throughout the 20th century. During that time human intervention in natural landscapes has increased and land use and management practices have intensified. The book will be useful for graduate students, professionals, land managers, practitioners and researchers with a good understanding of the basic principles of hydrology and hydrologic processes.

Stednick, 1991 This comprehensive reference combines sampling and analysis of wildland water in one text. It includes sampling techniques for precipitation, surface water and ground water. Analytical techniques for common water quality constituents are described. Step by step laboratory procedures for measuring pH, conductivity, solids, turbidity, alkalinity and hardness. End of chapter reviews with study questions and key words. Review of solution chemistry. Detailed field sampling procedures and program design.

Morgan, 2011-02-16 Ecologically sensitive building and landscape design is a broad intrinsically interdisciplinary field. Existing books independently cover narrow aspects of ecological design in depth: hydrology, ecosystems, soils, flora and fauna etc, but none of these books can boast of the integrated approach taken by this one. Drawing on the experience of the authors, this book begins to define explicit design methods for integrating consideration of

ecosystem processes and services into every facet of land use design management and policy The approach is to provide a prescriptive approach to ecosystem design based upon ecological engineering principles and practices This book will include a novel collection of design methods for the non built and built environments linking landscape design explicitly to ecosystem services
