Contouring Human Development Mukunda Mishra, Soumendu Chatterjee, 2020-05-11 This book acquaints readers with a range of techniques to help them effectively identify record map analyze and report on patterns in various dimensions of human development HD with spatial scales down to the village level It is impossible to capture HD at the local and global scale with only a single index because differences in HD at the international scale are caused by general factors whereas local scale differences are influenced by specific factors This book offers a variety of methods for scientifically mapping HD at any spatial scale It covers how to rationally select variables how to test the models how to validate the results and how to analyze them For this purpose it employs a case study on an Indian district The socio economic factors regulating the patterns of HD are now more complex than they were only a few decades ago making it essential to incorporate newer models in order to successfully replicate the real world situation Accordingly the book offers essential methodological tools techniques for mapping HD It sheds new light on a handful of statistical

multivariate analysis and machine learning algorithms that are rarely used in the social sciences when dealing with HD yet have sound mathematical and statistical bases These techniques can be successfully used for predictive analysis in the earth natural sciences decision sciences and management disciplines and are equally effective in terms of capturing predicting and projecting the composite HD landscape This book will especially benefit two groups of readers firstly HD practitioners who want to find out why some areas are doing better than others by exploring the complex interactions of spatially linked variables with different HD parameters And secondly practitioners in other branches of the social sciences who are not concerned with HD but are looking for hands on training with techniques they can apply in their respective field of spatial investigations

A Practical Guide to Theoretical Frameworks for Social Science Research Andrea J.

Bingham, Robert Mitchell, Daria S. Carter, 2024-02-13 This practical book offers a guide to finding, choosing, and applying theoretical frameworks to social sciences research and provides researchers with the scaffolding needed to reflect on their philosophical orientations and better situate their work in the existing landscape of empirical and theoretical knowledge. Using a multifaceted approach, the book provides clear definitions, primary tenets, historical context, highlights of the challenges, and contemporary discussion, and perhaps more importantly, concrete and successful examples of studies that have drawn on and incorporated each theoretical framework. The authors define and explain the connections among such concepts as ontology, epistemology, paradigm, theory, theoretical frameworks, conceptual frameworks, and research methodology. It describes the process of finding and effectively using theoretical and conceptual frameworks in research and offers brief overviews of particular theories within the following disciplines: sociology, psychology, education, leadership, public policy, political science, economics, organizational studies, and business. The book also has a dedicated chapter on critical theories, and for each theory, provides a definition, explores how the theory is useful for researchers, discusses the background and foundations, outlines key terms and concepts, presents examples of theoretical applications, and gives an overview of strengths and limitations. This book offers a useful starting point for any researcher interested in better situating their work in existing conceptual and theoretical knowledge, but it will be especially useful for graduate students and early career researchers who are looking for clear definitions of complex terms and concepts and for an introduction to useful theories across disciplines.
