variables The book covers a wide range of topics such as Sasakian geometry Kaehler and locally conformal Kaehler geometry the tangential CR equations Lorentzian geometry holomorphic statistical manifolds and paraquaternionic CR submanifolds Intended as a tribute to Professor Aurel Bejancu who discovered the notion of a CR submanifold of a Hermitian manifold in 1978 the book provides an up to date overview of several topics in the geometry of CR submanifolds Presenting detailed information on the most recent advances in the area it represents a useful resource for mathematicians and physicists alike

Spectral Geometry, Riemannian Submersions, and the Gromov-Lawson Conjecture Peter B. Gilkey,John V Leahy,JeongHyeong Park,1999-07-27 This cutting edge standard setting text explores the spectral geometry of Riemannian submersions Working for the most part with the form valued Laplacian in the class of smooth compact manifolds without boundary the authors study the relationship if any between the spectrum of Dp on Y and Dp on Z given that Dp is the p form valued Laplacian and pi Z Y is a Riemannian submersion After providing the necessary background including basic differential geometry and a discussion of Laplace type operators the authors address rigidity theorems They establish conditions that ensure that the pull back of every eigenform on Y is an eigenform on Z so the eigenvalues do not change then show that if a single eigensection is preserved the eigenvalues do not change for the scalar or Bochner Laplacians For the form valued Laplacian they show that if an eigenform is preserved then the corresponding eigenvalue can only increase They generalize these results to the complex setting as well However the spinor setting is quite different For a manifold with non trivial boundary and imposed Neumann boundary conditions the result is surprising the eigenvalues can change Although this is a relatively rare phenomenon the authors give examples a circle bundle or more generally a principal bundle with structure group G where the first cohomology group H1 G R is non trivial They show similar results in the complex setting show that eigenvalues can decrease in the spinor setting and offer a list of unsolved problems in this area Moving to some related topics involving questions of positive curvature for the first time in mathematical literature the authors establish a link between the spectral geometry of Riemannian submersions and the Gromov Lawson conjecture Spectral Geometry Riemannian Submersions and the Gromov Lawson Conjecture addresses a hot research area and promises to set a standard for the field Researchers and applied mathematicians interested in mathematical physics and relativity will find this work both fascinating and important **Differential Geometry and Global Analysis** Bang-Yen Chen,Nicholas D. Brubaker,Takashi Sakai,Bogdan D. Suceavă,Makiko Sumi Tanaka,Hiroshi Tamaru,Mihaela B. Vajiac,2022-04-07 This volume contains the proceedings of the AMS Special Session on Differential Geometry and Global Analysis Honoring the Memory of Tadashi Nagano 1930 2017 held January 16 2020 in Denver Colorado Tadashi Nagano was one of the great Japanese differential geometers whose fundamental and seminal work still attracts much interest today This volume is inspired by his work and his legacy and while recalling historical results presents recent developments in the geometry of symmetric spaces as well as generalizations of symmetric spaces minimal surfaces and minimal submanifolds totally geodesic submanifolds and

their classification Riemannian affine projective and conformal connections the M_ M_ method and its applications and maximal antipodal subsets Additionally the volume features recent achievements related to biharmonic and biconservative hypersurfaces in space forms the geometry of Laplace operator on Riemannian manifolds and Chen Ricci inequalities for Riemannian maps among other topics that could attract the interest of any scholar working in differential geometry and global analysis on manifolds   *Pseudo-Riemannian Geometry, [delta]-invariants and Applications* Bang-yen Chen,2011 The first part of this book provides a self contained and accessible introduction to the subject in the general setting of pseudo Riemannian manifolds and their non degenerate submanifolds only assuming from the reader some basic knowledge about manifold theory A number of recent results on pseudo Riemannian submanifolds are also included The second part of this book is on invariants which was introduced in the early 1990s by the author The famous Nash embedding theorem published in 1956 was aimed for in the hope that if Riemannian manifolds could be regarded as Riemannian submanifolds this would then yield the opportunity to use extrinsic help However this hope had not been materialized as pointed out by M Gromov in his 1985 article published in Asterisque The main reason for this is the lack of control of the extrinsic invariants of the submanifolds by known intrinsic invariants In order to overcome such difficulties as well as to provide answers for an open question on minimal immersions the author introduced in the early 1990s new types of Riemannian invariants known as invariants which are very different in nature from the classical Ricci and scalar curvatures At the same time he was able to establish general optimal relations between invariants and the main extrinsic invariants Since then many new results concerning these invariants have been obtained by many geometers The second part of this book is to provide an extensive and comprehensive survey over this very active field of research done during the last two decades   *Metric Foliations and Curvature* Detlef Gromoll,Gerard Walschap,2009-03-28 In the past three or four decades there has been increasing realization that metric foliations play a key role in understanding the structure of Riemannian manifolds particularly those with positive or nonnegative sectional curvature In fact all known such spaces are constructed from only a representative handful by means of metric fibrations or deformations thereof This text is an attempt to document some of these constructions many of which have only appeared in journal form The emphasis here is less on the fibration itself and more on how to use it to either construct or understand a metric with curvature of fixed sign on a given space   *Differential Equations - Geometry, Symmetries and Integrability* Boris Kruglikov,Valentin Lychagin,Eldar Straume,2009-07-24 The Abel Symposium 2008 focused on the modern theory of differential equations and their applications in geometry mechanics and mathematical physics Following the tradition of Monge Abel and Lie the scientific program emphasized the role of algebro geometric methods which nowadays permeate all mathematical models in natural and engineering sciences The ideas of invariance and symmetry are of fundamental importance in the geometric approach to differential equations with a serious impact coming from the area of integrable systems and field theories This volume consists of original contributions and broad

overview lectures of the participants of the Symposium The papers in this volume present the modern approach to this classical subject   *Differential Geometry of Lightlike Submanifolds* Krishan L.
