

## WORKING LOAD LIMIT

The maximum force that you should load is dependent on the working load limit (WLL). The WLL incorporates a safety factor (SF). The SF provides additional margin of safety. The design factor (DF) is the ratio of the breaking strength to the WLL.

Let's calculate the WLL of a chain or rig when SF = 5.

Note: Section 172 (1) of the Construction Regulation states that the SF shall be greater than or equal to 5. The design factor (DF) is the ratio of the breaking strength to the WLL.

WLL = 1000 pounds (rated capacity) ÷ 5 (SF)  
WLL = 200 pounds

In this example, the chain or rig when loaded to 200 pounds is in compliance with the Construction Regulation.

## Fibre Rope Selection

Select the size and type of rope to use based on the degree of risk, the load, and proper multiplying the working load (WLL) by the SF.

The manufacturer's SF provides a level of safety. The SF is greater than the SF of all requirements of users and regulations. Together, they provide the WLL to account for reduced capacity due to:

- wear, broken fibres, broken
- abrasions or construction
- shock loads
- some deterioration in load
- reduction in strength caused
- corrosion or strength caused
- knots weakened or ground

If you notice rope that is defective or damaged, do not use it.

Let's calculate the WLL of a rope to lift a 10,000 lb load.

Note: Section 172 (1) of the Construction Regulation states that the SF shall be greater than or equal to 5.

WLL = 10,000 pounds (load) ÷ 5 (SF)  
WLL = 2,000 pounds

In this example, to meet the WLL, you must use a rope with a breaking strength of at least 10,000 pounds.

Similar to synthetic slings, you should only use a rope by attaching a strong, rated stop.
