Elmqvist,Michail Fragkias,Julie Goodness,Burak Güneralp,Peter J. Marcotullio,Robert I. McDonald,Susan Parnell,Maria Schewenius,Marte Sendstad,Karen C. Seto,Cathy Wilkinson,2013-09-21 Urbanization is a global phenomenon and the book emphasizes that this is not just a social technological process It is also a social ecological process where cities are places for nature and where cities also are dependent on and have impacts on the biosphere at different scales from local to global The book is a global assessment and delivers four main conclusions Urban areas are expanding faster than urban populations Half the increase in urban land across the world over the next 20 years will occur in Asia with the most extensive change expected to take place in India and China Urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns which together will have significant impacts on net primary production ecosystem health and biodiversity Urban expansion will heavily draw on natural resources including water on a global scale and will often consume prime agricultural land with knock on effects on biodiversity and ecosystem services elsewhere Future urban expansion will often occur in areas where the capacity for formal governance is restricted which will constrain the protection of biodiversity and management of ecosystem services      *Technocrats and the Politics of Drought and*

*Development in Twentieth-Century Brazil* Eve E. Buckley,2017-09-11 Eve E Buckley s study of twentieth century Brazil examines the nation s hard social realities through the history of science focusing on the use of technology and engineering as vexed instruments of reform and economic development Nowhere was the tension between technocratic optimism and entrenched inequality more evident than in the drought ridden Northeast sert o plagued by chronic poverty recurrent famine and mass migrations Buckley reveals how the physicians engineers agronomists and mid level technocrats working for

federal agencies to combat drought were pressured by politicians to seek out a technological magic bullet that would both end poverty and obviate the need for land redistribution to redress long standing injustices Scientists planned and oversaw huge projects including dam construction irrigation for small farmers and public health initiatives They were Buckley shows sincerely determined to solve the drought crisis and improve the lot of poor people in the sert o Over time however they came to the frustrating realization that despite technology s tantalizing promise of an apolitical means to end poverty political collisions among competing stakeholders were inevitable Buckley s revelations about technocratic hubris the unexpected consequences of environmental engineering and constraints on scientists as agents of social change resonate with today s hopes that science and technology can solve society s most pressing dilemmas including climate change
