*The Problem with Software* Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn t teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn t teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It s an open secret that there is little engineering in software engineering which continues to rely

not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship

Langer,2020-01-02 This book provides a detailed how to guide addressing aspects ranging from analysis and design to the implementation of applications which need to be integrated within legacy applications and databases The analysis and design of the next generation of software architectures must address the new requirements to accommodate the Internet of things IoT cybersecurity blockchain networks cloud and quantum computer technologies As 5G wireless increasingly establishes itself over the next few years moving legacy applications into these new architectures will be critical for companies to compete in a consumer driven and social media based economy Few organizations however understand the challenges and complexities of moving from a central database legacy architecture to a ledger and networked environment The challenge is

not limited to just designing new software applications Indeed the next generation needs to function more independently on various devices and on more diverse and wireless centric networks Furthermore databases must be broken down into linked list based blockchain architectures which will involve analytic decisions regarding which portions of data and metadata will be processed within the chain and which ones will be dependent on cloud systems Finally the collection of all data throughout these vast networks will need to be aggregated and used for predictive analysis across a variety of competitive business applications in a secured environment Certainly not an easy task for any analyst designer Many organizations will continue to use packaged products and open source applications These third party products will need to be integrated into the new architecture paradigms and have seamless data aggregation capabilities while maintaining the necessary cyber compliances The book also clearly defines the roles and responsibilities of the stakeholders involved including the IT departments users executive sponsors and third party vendors The book s structure also provides a step by step method to help ensure a higher rate of success in the context of re engineering existing applications and databases as well as selecting third party products conversion methods and cybercontrols It was written for use by a broad audience including IT developers software engineers application vendors business line managers and executives
