Ferrier, Iain J. Gordon, Shahbaz Khan, 2015-03-26 This comprehensive volume describes how ecosystem services based approaches can assist in addressing major global and regional water challenges such as climate change biodiversity loss and water security in the developing world by integrating scientific knowledge from different disciplines such as hydrological modelling environmental economics psychology and international law. Empirical assessments at the national catchment and regional levels are used to critically appraise this systemic approach and the merits and potential limitations are presented. The practicalities of this approach with regard to water resources management nature conservation and sustainable business practices are discussed and the role of society in underpinning the concept of ecosystem services is explored. Presenting new insights and perspectives on how to shape future strategies this contributory volume is a valuable reference for researchers academics students and policy makers in environmental studies hydrology

Hydrological Modelling in Arid and Semi-Arid Areas

Howard Wheater, Soroosh Sorooshian, K. D. Sharma, 2007-11-22 Arid and semi arid regions are defined as areas where water is at its most scarce The hydrological regime in these areas is extreme and highly variable and they face great pressures to deliver and manage freshwater resources However there is no guidance on the decision support tools that are needed to underpin flood and water resource management in arid areas UNESCO initiated the Global network for Water and Development Information for arid lands GWADI and arranged a workshop of the world's leading experts to discuss these issues This book presents chapters from contributors to the workshop and includes case studies from the world's major arid regions to demonstrate model applications and web links to tutorials and state of the art modelling software This volume is a valuable reference for researchers and engineers working on the water resources of arid and semi arid regions

Tropical Glaciers Georg Kaser, Henry Osmaston, 2002 Glaciers in the tropics and their environmental consequences *Climate Change and Himalaya: Natural Hazards and Mountain Resources* J. Sundaresan, P. Gupta, K.M. Santosh, R. Boojh, 2014-01-01 The book Climate Change and Himalaya Natural hazards and mountain resources presents the resources of Himalaya along with the potential natural hazards It consists twenty two chapters from researchers working in different institutions with multi disciplinary approach More than seven hundred glaciers were monitored and discussed in one of the chapter of this book This book will be highly useful to researchers policy makers students and is an essential document to libraries of universities colleges research institutions and personnel collections

The Foreseeable Future for Water Planning

Andrew James Segrave, 2014-09-14 People and societies conceptualise and experience time in fundamentally different ways This basic aspect of perception significantly influences the way we frame problems and conceive solutions This book shows how time perspectives differ across national cultures and across professional roles It shows how these differences generate ambiguity when it comes to defining problems and devising solutions in the water sector This is especially important when dealing with problems such as Sustainable Water Resources Management and Climate Change that involve culturally and professionally diverse stakeholders Response strategies to such problems inherently require concerted action because of the large spatial and temporal scale on which they take place and to minimise the occurrence of conflicting interventions This disparity between diverse problem perceptions and the need for collective understanding and united action is increasingly recognised as an important concern in the field of water resource management The conclusions are important because the time horizons considered in planning and setting research agendas influence what problems are perceived what questions are asked and what solutions are sought In general more time needs to be invested in framing problems This is particularly

important for participatory planning and transdisciplinary research where the diversity in Motivational Space is greatest It is recommended that Motivational Space be collectively and explicitly framed from the outset of all planning projects especially in terms of Temporal Extent When it comes to setting research agendas it is important to match the Motivational Space of those who prioritize the questions with the goal of the research programme Author Andrew James Segrave KWR Watercycle Research Institute Utrecht The Netherlands *Groundwater Modelling in Arid and Semi-Arid Areas* Howard S.

Wheater, Simon A. Mathias, Xin Li, 2010-09-09 Arid and semi arid regions face major challenges in the management of scarce freshwater resources under pressures of population economic development climate change pollution and over abstraction Groundwater is commonly the most important water resource in these areas Groundwater models are widely used globally to understand groundwater systems and to guide decisions on management However the hydrology of arid and semi arid areas is very different from that of humid regions and there is little guidance on the special challenges of groundwater modelling for these areas This book brings together the experience of internationally leading experts to fill a gap in the scientific and technical literature It introduces state of the art methods for modelling groundwater resources illustrated with a wide ranging set of illustrative examples from around the world The book is valuable for researchers practitioners in developed and developing countries and graduate students in hydrology hydrogeology water resources management environmental engineering and geography **Handbook of Knowledge Management for Sustainable Water Systems** Meir

Russ, 2018-03-19 A comprehensive synthesis of the best practices for management in the vital and rapidly growing field of sustainable water systems Handbook of Knowledge Management for Sustainable Water Systems offers an authoritative resource that goes beyond the current literature to provide an interdisciplinary approach to the topic The text explores the concept of knowledge management as a key asset and a crucial component of organizational strategy as applied to the sustainability of water systems Using the knowledge management framework the authors discuss socio hydrology sustainable water systems that reflect the present political economic and technological reality The book draws on contributors from a number of disciplines including economic development financial systems networks IT IS data analytics behavioral social water systems governance systems and related ecosystems This vital resource Contains a multifaceted approach that draws on a number of disciplines and contains contributions from experts in their various fields Offers a coherent approach that discusses the dynamic concept of sustainability drawing on data from people systems and processes of diverse water systems Includes a comprehensive review of the topic and offers a platform for dialog between theory and empirical analysis Explores opportunities for multi constituent synthesis This book is written for regulators water utility practitioners researchers and students interested in the fledgling field of knowledge management and sustainable water systems and those who want to improve the effective and efficient management of a complex water system **Inter-Basin Water Transfer** Fereidoun

Ghassemi, Ian White, 2007-01-11 Increasing demands for irrigation domestic and industrial water have generated a massive

growth world wide in the number of large water infrastructure projects involving the transfer of water from basins considered to have surplus water to those where the demand for water has exceeded or is expected to exceed supplies Using the experiences of projects in Australia United States Canada China and India this book examines case studies within the diverse geographical climatic economic and policy regimes operating in these countries It examines the water resources of Australia the driest inhabited continent and explores inter basin water transfer projects in the United States Canada China and India examining their benefits and impacts within these nations contrasting economies and governance systems This comprehensive and well illustrated text will be of great interest to professionals and researchers in the fields of hydrology water resources and to those engaged in environmental science policy and regulation **Dynamic Programming Based**

Operation of Reservoirs K. D. W. Nandalal, Janos J. Bogardi, 2007-05-10 Dynamic programming is a method of solving multi stage problems in which decisions at one stage become the conditions governing the succeeding stages It can be applied to the management of water reservoirs allowing them to be operated more efficiently This is one of the few books dedicated solely to dynamic programming techniques used in reservoir management It presents the applicability of these techniques and their limits on the operational analysis of reservoir systems The dynamic programming models presented in this book have been applied to reservoir systems all over the world helping the reader to appreciate the applicability and limits of these models The book also includes a model for the operation of a reservoir during an emergency situation This volume will be a valuable reference to researchers in hydrology water resources and engineering as well as professionals in reservoir management Numerical Computations: Theory and Algorithms Yaroslav D.
