Risks And Decisions For Conservation And Environmental Management:

Risks and Decisions for Conservation and Environmental Management Mark A. Burgman, 2005 Risks and Decisions for Conservation and Environmental Management Mark Burgman, 2005-04-07 This book outlines how to conduct a complete environmental risk assessment. The first part documents the psychology and philosophy of risk perception and assessment, introducing a taxonomy of uncertainty and the importance of context. It provides a critical examination of the use and abuse of expert judgement and goes on to outline approaches to hazard identification and subjective ranking that account for uncertainty and context. The second part of the book describes technical tools that can assist risk assessments to be transparent and internally consistent. These include interval arithmetic, ecotoxicological methods, logic trees, and Monte Carlo simulation. These methods have an established place in risk assessments in many disciplines, and their strengths and weaknesses are explored. The last part of the book outlines some new approaches, including p bounds and information gap theory, and describes how quantitative and subjective assessments can be used to make transparent decisions.

Application of Threshold Concepts in Natural Resource Decision Making Glenn R. Guntenspergen, 2014-02-07 Natural resource managers face a complex decision-making environment characterized by the potential occurrence of rapid and abrupt ecological change. These abrupt changes are poorly accommodated by traditional natural resource planning and decision-making processes. As recognition of threshold processes has increased, contemporary models of ecological systems have been modified to better represent a broader range of ecological system dynamics. Key conceptual advances associated with the ideas of non-linear responses, the existence of multiple ecological stable states, and critical thresholds are more likely the rule than the exception in ecological systems. Once an ecological threshold is crossed, the ecosystem in question is not likely to return to its previous state. There are many examples, and a general consensus that climatic disruptions will drive now stable systems across ecological thresholds. This book provides professional resource managers with a broad general decision framework that illustrates the utility of including ecological threshold concepts in natural resource management. It gives an entry into the literature in this rapidly evolving concept with descriptions and discussion of the promising statistical approaches for threshold detection and demonstrations of the utility of the threshold framework via a series of case studies.

Woinarski, 2023-02-01 The Australian wildfires of 2019-20 Black Summer were devastating and unprecedented. These megafires burnt more than 10 million hectares, mostly of forests in southern and eastern Australia. Many of the fires were uncontrollable. These megafires affected many of Australia's most important conservation areas and severely impacted threatened species and ecological communities. They were a consequence of climate change and offered a glimpse of how this is likely to continue to affect our future. Australia's Megafires includes contributions by more than 200 researchers and managers with direct involvement in the management and conservation of the biodiversity affected by the Black Summer.

Biodiversity Monitoring in Australia David Lindenmayer, Philip Gibbons, 2012 Ecological and biodiversity based monitoring has been marked by an appalling lack of effectiveness and lack of success in Australia for more than 40 years despite the billions of dollars that are invested in biodiversity conservation annually What can be done to rectify this situation This book tackles many aspects of the problem of biodiversity monitoring It arose from a major workshop held at The Australian National University in February 2011 attended by leaders in the science policy making and management arenas of biodiversity conservation Chapter contributors examine what has led to successful monitoring the key problems with biodiversity monitoring and practical solutions to those problems By capturing critical insights into successes failures and solutions the authors provide high level guidance for important initiatives such as the National Biodiversity Strategy Ultimately the authors hope to considerably improve the quality and effectiveness of biodiversity monitoring in Australia and to arrest the decline of biodiversity
