Mavis Hetherington, Elaine A. Blechman, 2014-02-25 Concern with stress and coping has a long history in biomedical psychological and sociological research The inadequacy of simplistic models linking stressful life events and adverse physical and psychological outcomes was pointed out in the early 1980s in a series of seminal papers and books The issues and theoretical models discussed in this work shaped much of the subsequent research on this topic and are reflected in the papers in this volume The shift has been away from identifying associations between risks and outcomes to a focus on factors and processes that contribute to diversity in response to risks Based on the Family Research Consortium's fifth summer institute this volume focuses on stress and adaptability in families and family members The papers explore not only how a variety of stresses influence family functioning but also how family process moderates and mediates the contribution of individual and environmental risk and protective factors to personal adjustment They reveal the complexity of current theoretical models research strategies and analytic approaches to the study of risk resiliency and vulnerability along with the central role risk family process and adaptability play in both normal development and childhood psychopathology **The Oxford Handbook of Developmental Psychology, Vol. 2** Philip David Zelazo, 2013-01-15 Research in developmental psychology which examines the history origins and causes of behavior and age related changes in behavior seeks to construct a complex multi level characterization of behavior as it unfolds in time across a range of time scales from the milliseconds of reaction time to the days and weeks of childhood the decades of the human lifespan and even beyond to multiple generations Behavior in this view is embedded within what is essentially a dynamic system of relations extending deep within individuals Thorough and engaging this handbook explores the impact of this research on what is now known about psychological development from birth to biological maturity and it highlights the extent to which the most cutting edge developmental science reflects a new kind of intellectual synthesis one that reveals how cultural social cognitive neural and molecular processes work together to yield human behavior and changes in human behavior With insightful contributions from more than 50 of the world's leading developmental scientists these two volumes will serve as an influential and informed text for students and as an authoritative desk reference for years to come Risks and Problem Behaviors in Adolescence Richard M. Lerner, Christine M. Ohannessian, 2014-02-04 The articles in this volume illustrate how development is propelled by the bidirectional relations that occur between the person and all levels of the context The authors argue that adolescent life is embedded in a complicated developmental system involving multiple features of the individual e.g biology emotions personality and

cognition and the multiple levels of his or her social ecology e g peers family school the workplace and the public policy and legal systems that structure and impact behavioural opportunities for and the actions of adolescents These articles have important implications for the design of interventions aimed at adolescent problem behaviours
