Semantics Of Digital Circuits Lecture Notes In Computer Science 285:

Semantics of Digital Circuits Carlos Delgado Kloos,1987 **Formal Semantics for VHDL** Carlos Delgado Kloos,P. Breuer,2012-12-06 It is recognized that formal design and verification methods are an important requirement for the attainment of high quality system designs The field has evolved enormously during the last few years resulting in the fact that formal design and verification methods are nowadays supported by several tools both commercial and academic If different tools and users are to generate and read the same language then it is necessary that the same semantics is assigned by them to all constructs and elements of the language The current IEEE standard VHDL language reference manual LRM tries to define VHDL as well as possible in a descriptive way explaining the semantics in English But rigor and clarity are very hard to maintain in a semantics defined in this way and that has already given rise to many misconceptions and contradictory interpretations Formal Semantics for VHDL is the first book that puts forward a cohesive set of semantics for the VHDL language The chapters describe several semantics each based on a different underlying formalism two of them use Petri nets as target language and two of them higher order logic Two use functional concepts and finally another uses the concept of evolving algebras Formal Semantics for VHDL is essential reading for researchers in formal methods and can be used as a text for an advanced course on the subject *Methods of Programming* M. Broy,1991 The systematic development of software systems is a central task of computing science A software system is the result of putting together knowledge about the application the requirements and the structures of computing science Under the heading CIP Computer aided Intuition guided Programming a group of researchers led by Prof F L Bauer and Prof K Samelson started work in 1975 in the direction of formal program specification transformational programming and tool supportfor program development The collection of papers in this volume presents examples of a formal approach to programming language concepts and program development based on algebraic specifications and program transformations Examples are also presented of evolutions and modificationsof the original ideas of the CIP project The topics range from descriptionsof the program development process to derivations of algorithms from specifications The volume is dedicated to Prof F L Bauer PUBLISHER S WEBSITE

Network Algebra Gheorghe Stefanescu,2012-12-06 Network Algebra considers the algebraic study of networks and their behaviour It contains general results on the algebraic theory of networks recent results on the algebraic theory of models for parallel programs as well as results on the algebraic theory of classical control structures The results are presented in a unified framework of the calculus of flownomials leading to a sound understanding of the algebraic fundamentals of the network theory The term network is used in a broad sense within this book as consisting of a collection of interconnecting cells and two radically different specific interpretations of this notion of networks are studied One interpretation is additive when only one cell is active at a given time this covers the classical models of control specified by finite automata or flowchart schemes The second interpretation is multiplicative where each cell is always active covering

models for parallel computation such as Petri netsor dataflow networks More advanced settings mixing the two interpretations are included as well Network Algebra will be of interest to anyone interested in network theory or its applications and provides them with the results needed to put their work on a firm basis Graduate students will also find the material within this book useful for their studies   Theoretical Foundations of VLSI Design K. McEvoy,J. V. Tucker,2003-12-04 Recent research on the physical technologies of very large scale integration VLSI   **Computer Hardware Description Languages and their Applications** D. Borrione,R. Waxman,2014-06-28 The topic areas presented within this volume focus on design environments and the applications of hardware description and modelling including simulation verification by correctness proofs synthesis and test The strong relationship between the topics of CHDL 91 and the work around the use and re standardization of the VHDL language is also explored The quality of this proceedings and its significance to the academic and professional worlds is assured by the excellent technical programme here compiled   **The Munich Project CIP** ,1988-01-13 This book is the second of two volumes that present the main results which emerged from the project CIP Computer Aided Intuition Guided Programming at the Technical University of Munich Its central theme is program development by transformation a methodology which is becoming more and more important Whereas Volume I contains the description and formal specification of a wide spectrum language CIP L particularly tailored to the needs of transformational programming Volume II serves a double purpose First it describes a system called CIP S that is to assist a programmer in the method of transformational programming Second it gives a non toy example for this very method since it contains a formal specification of the system core and transformational developments for the more interesting system routines Based on a formal calculus of program transformations the informal requirements for the system are stated Then the system core is formally specified using the algebraic data types and the pre algorithmic logical constructs of the wide spectrum language CIP L It is demonstrated how executable procedural level programs can be developed from this specification according to formal rules The extensive collection of these rules is also contained in the book it can be used as the basis for further developments using this method Since the system has been designed in such a way that it is parameterized with the concrete programming language to be transformed the book also contains a guide how to actualize this parameter the proceeding is exemplified with a small subset of CIP L   **Prospects for Hardware Foundations** Bernhard Möller,John V. Williams,2000-06-30 This encyclopaedia covers An Algorithm for Abductive Inference in Artificial Intelligence to Web Financial Information System Server Automatic Verification Methods for Finite State Systems Joseph Sifakis,1990-01-10 This volume contains the proceedings of a workshop held in Grenoble in June 1989 This was the first workshop entirely devoted to the verification of finite state systems The workshop brought together researchers and practitioners interested in the development and use of methods tools and theories for automatic verification of finite state systems The goal at the workshop was to compare verification methods and tools to assist the applications designer The papers in this volume review verification techniques for finite state systems and evaluate their relative advantages The techniques considered cover various specification formalisms such as process algebras automata and logics Most of the papers focus on exploitation of existing results in three application areas hardware design communication protocols and real time systems

Specification and Development of Interactive Systems Manfred Broy,Ketil Stølen,2012-12-06 This book presents a fundamental mathematical and logical approach to soft ware and systems engineering Considering the large number of books de scribing mathematical approaches to program development it is important to explain what we consider to be the specific contribution of our book to identify our goals and to characterize our intended target audience Most books dealing with the mathematics and logics of programming and system development are mainly devoted to programming in the small This is in contrast to our book where the emphasis is on modular system development with the help of component specifications with precisely identified interfaces and refinement concepts Our book aims at systems development carried out in a systematic way based on a clear mathematical theory We do not claim that this book presents a full blown engineering method In fact this is certainly not a book for the application driven software engi neer looking for a practical method for system development in an industrial context It is much rather a book for the computer scientist and the scientifi cally interested engineer who looks for basic principles of system development and moreover its mathematical foundations It is also a book for method builders interested in a proper mathematical foundation on which they can build a practical development method and industrial strength support tools **Programming Methodology** Annabelle Mclver,Carroll Morgan,2002-10-01 Written by the members of the IFIP Working Group 2 3 Programming Methodology this text constitutes an exciting reference on the front line of research activity in programming methodology The range of subjects reflects the current interests of the members and will offer insightful and controversial opinions on modern programming methods and practice The material is arranged in thematic sections each one introduced by a problem which epitomizes the spirit of that topic The exemplary problem will encourage vigorous discussion and will form the basis for an introduction tutorial for its section *Foundations of Software Technology and Theoretical Computer Science* Kesav V. Nori,Sanjeev Kumar,1988-11-17 This volume contains the proceedings of the 8th Conference on Foundations of Software Technology and Theoretical Computer Science held in Pune India on December 21 23 1988 This internationally well established Indian conference series provides a forum for actively investigating the interface between theory and practice of Software Science It also gives an annual occasion for interaction between active research communities in India and abroad Besides attractive invited papers the volume contains carefully reviewed submitted papers on the following topics Automata and Formal Languages Graph Algorithms and Geometric Algorithms Distributed Computing Parallel Algorithms Database Theory Logic Programming Programming Methodology Theory of Algorithms Semantics and Complexity *CSL '87* Egon Börger,Hans Kleine Büning,Michael M. Richter,1988-09-14 This volume contains the papers which were presented to the workshop Computer Science Logic held in Karlsruhe on October 12 16 1987 Traditionally Logic or more specifically Mathematical Logic splits into several subareas Set Theory Proof Theory Recursion Theory and Model Theory In addition there is what sometimes is called Philosophical Logic which deals with topics like nonclassical logics and which for historical reasons has been developed mainly at philosphical

departments rather than at mathematics institutions Today Computer Science challenges Logic in a new way The theoretical analysis of problems in Computer Science for intrinsic reasons has pointed back to Logic A broad class of questions became visible which is of a basically logical nature These questions are often related to some of the traditional disciplines of Logic but normally without being covered adequately by any of them The novel and unifying aspect of this new branch of Logic is the algorithmic point of view which is based on experiences people had with computers The aim of the Computer Science Logic workshop and of this volume is to represent the richness of research activities in this field in the German speaking countries and to point to their underlying general logical principles **MFDBS 89** Janos Demetrovics,Bernhard Thalheim,1989-05-30 This volume is a collection of the most important contributions presented at the second MFDBS conference held in Visegr d Hungary June 26 30 1989 The papers selected from more than one hundred submissions originating from 23 countries in 4 continents can be roughly divided into the following sections theoretical fundamentals of relational databases logical foundations and databases data modelling database design deductive databases transaction management and security concurrency control and distributed databases The volume reflects the current state of knowledge and is a guide to further development in database theory **Statistical and Scientific Database Management** Maurizio Rafanelli,John C. Klensin,Per Svensson,1989-02-08 The Fourth International Working Conference on Statistical and Scientific Data Base Management IV SSDBM held on June 21 23 1988 in Rome Italy continued the series of conferences initiated in California in December 1981 The purpose of this conference was to bring together database researchers users and system builders working in this specific field to discuss the particular points of interest to propose new solutions to the problems of the domain and to expand the topics of the previous conferences both from the theoretical and from the applicational point of view The papers of four scientific sessions dealt with the following topics knowledge base and expert system data model natural language processing query language time performance user interface heterogeneous data classification storage constraints automatic drawing ranges and trackers and arithmetic coding Two other special sessions presented work on progress papers on geographical data modelling spatial database queries user interface in an Object Oriented SDB interpretation of queries graphical query language and knowledge browsing front ends The conference also had three invited papers on topics of particular interest such as Temporal Data Statistical Data Management Requirements and Knowledge Based Decision Support Systems included in this volume The introductory paper by M Rafanelli provides both an introduction to the general concepts helpful to people outside the field and a survey of all the papers in these Proceedings Furthermore there were three open panels Papers by the chairmen contributions of the panelists and a summary of the respective discussions are included in this volume too ICDT '88 M. Gyssens (Marc),Jan Paredaens,D.
