Social Sciences in General

Signs, Mind, and Reality Sebastian Shaumyan, 2006-04-06 The book presents a new science of semiotic linguistics The goal of semiotic linguistics is to discover what characterizes language as an intermediary between the mind and reality so that language creates the picture of reality we perceive The cornerstone of semiotic linguistics is the discovery and resolution of language antinomies contradictions between two apparently reasonable principles or laws Language antinomies constitute the essence of language and hence must be studied from both linguistic and philosophical points of view The basic language antinomy which underlies all other antinomies is the antinomy between meaning and information Both generative and classical linguistic theories are unaware of the need to distinguish between meaning and information By confounding these notions they are unable to discover language antinomies and confine their research to naturalistic description of superficial language phenomena rather than the quest for the essence of language

The Semiotics of Culture and Language Robin P. Fawcett, 2015-12-17 Semiotics the study of the general principles of signs and sign systems is crucial to an understanding of human nature both social and psychological The sign systems that we use for interaction with other living beings determine our potential for thought and social action and language is central among them It is the implicit claim of this two volume work that linguistics has something very specific to give to semiotics and many would further claim that relational network models of language in particular i.e. systematic and stratificational linguistics have a fundamental contribution to make

Semiotics and Linguistics Yishai Tobin, 1990-01-01

The Ecology and Semiotics of Language Learning Leo van Lier, 2006-04-18 In this book I try to give a coherent and consistent overview of what an ecological approach to language learning might look like This is not a

fully fledged grand theory that aims to provide an explanation of everything but an attempt to provide a rationale for taking an ecological world view and applying it to language education which I regard as one of the most important of all human activities Goethe once said that everything has been thought of before but that the difficulty is to think of it again The same certainly is true of the present effort If it has any innovative ideas to offer these lie in a novel combination of thoughts and ideas that have been around for a long long time The reader will encounter influences that range from Spinoza to Bakhtin and from Vygotsky to Halliday The scope of the work is intentionally broad covering all major themes that are part of the language learning process and the language teaching profession These themes include language perception and action self learning critical pedagogy and research At the same time I have attempted to look at both the macro and the micro sides of the ecological coin and address issues from both a theoretical and a practical perspective This then aims to be a book that can be read by practitioners and theoreticians alike and the main idea is that it should be readable and challenging at the same time
