Sensory Robotics For The Handling Of Lim:

Sensory Robotics for the Handling of Limp Materials Paul M. Taylor, 2012-12-06 Limp materials are used in many economically important industries such as garment manufacture shoe manufacture aerospace composites and automobiles seats and trim The use of sensors is essential for reliable robotic handling of these materials which are often based on naturally occurring substances such as cotton and leather The materials are limp and have non homogeneous mechanical properties which are often impossible to predict accurately The applications are very demanding for vision and tactile sensing and signal processing adaptive control systems planning and systems integration This book comprises the collection of papers presented at the NATO Advanced Research Workshop on Sensory Robotics for the Handling of Limp Materials held in October 1988 at II Ciocco Tuscany Italy The aim of the workshop was to examine the state of the art and determine what research is needed to provide the theoretical and technological tools for the successful application of sensory robotics to the handling of limp materials The meeting also acted as the first ever forum for the interchange of knowledge between applications driven researchers and those researching into the provision of fundamental tools The participants were drawn from academia 20 industry 5 and other non university research organisations 5

Digital Technology Advancements in Knowledge Management Gyamfi, Albert,Williams, Idongesit,2021-06-18 Knowledge management has always been about the process of creating sharing using and applying knowledge within and between organizations Before the advent of information systems knowledge management processes were manual or offline However the emergence and eventual evolution of information systems created the possibility for the gradual but slow automation of knowledge management processes These digital technologies enable data capture data storage data mining data analytics and data visualization The value provided by such technologies is enhanced and distributed to organizations as well as customers using the digital technologies that enable interconnectivity Today the fine line between the technologies enabling the technology driven external pressures and data driven internal organizational pressures is blurred Therefore how technologies are combined to facilitate knowledge management processes is becoming less standardized This results in the question of how the current advancement in digital technologies affects knowledge management processes both within and outside organizations Digital Technology Advancements in Knowledge Management addresses how various new and emerging digital technologies can support knowledge management processes within

organizations or outside organizations Case studies and practical tips based on research on the emerging possibilities for knowledge management using these technologies is discussed within the chapters of this book It both builds on the available literature in the field of knowledge management while providing for further research opportunities in this dynamic field This book highlights topics such as human robot interaction big data analytics software development keyword extraction and artificial intelligence and is ideal for technology developers academics researchers managers practitioners stakeholders and students who are interested in the adoption and implementation of new digital technologies for knowledge creation sharing aggregation and storage

New Laws of Robotics Frank Pasquale, 2020-10-27 Essential reading for all who have a vested interest in the rise of AI Daryl Li AI Society Thought provoking Explores how we can best try to ensure that robots work for us rather than against us and proposes a new set of laws to provide a conceptual framework for our thinking on the subject Financial Times Pasquale calls for a society wide reengineering of policy politics economics and labor relations to set technology on a more regulated and egalitarian path Makes a good case for injecting more bureaucracy into our techno dreams if we really want to make the world a better place Wired Pasquale is one of the leading voices on the uneven and often unfair consequences of AI in our society Every policymaker should read this book and seek his counsel Safiya Noble author of Algorithms of Oppression Too many CEOs tell a simple story about the future of work if a machine can do what you do your job will be automated and you will be replaced They envision everyone from doctors to soldiers rendered superfluous by ever more powerful AI Another story is possible In virtually every walk of life robotic systems can make labor more valuable not less Frank Pasquale tells the story of nurses teachers designers and others who partner with technologists rather than meekly serving as data sources for their computerized replacements This cooperation reveals the kind of technological advance that could bring us all better health care education and more while maintaining meaningful work These partnerships also show how law and regulation can promote prosperity for all rather than a zero sum race of humans against machines Policymakers must not allow corporations or engineers alone to answer questions about how far AI should be entrusted to assume tasks once performed by humans or about the optimal mix of robotic and human interaction The kind of automation we get and who benefits from it will depend on myriad small decisions about how to develop AI Pasquale proposes ways to democratize that decision making rather than centralize it in unaccountable firms Sober yet optimistic New Laws of Robotics offers an inspiring vision of technological progress in which human capacities and expertise are the irreplaceable center of an inclusive economy
