developments on the plantation in the seventeenth century urban setting and in the modern era Those chapters form an essential frame of reference for the data in the HABS listings and call attention to many other structures that are a part of the history of building in the Pelican State Anyone interested in the state's architecture or history will find Louisiana Buildings indispensable

The Rise of the Image Thomas Frangenberg, 2017-07-05 The Rise of the Image reveals how illustrations have come to play a primary part in books on art and architecture Italian Renaissance art is the main focus for this anthology of essays which analyse key episodes in the history of illustration from the sixteenth to the twentieth century The authors raise new issues about the imagery in books on the visual arts by Leonardo da Vinci Giorgio Vasari Sebastiano Serlio Andrea Palladio Girolamo Teti and Andrea Pozzo The concluding essays evaluate the roles of reproductive media including photography in Victorian and twentieth century art books Throughout images in books are considered as vehicles for ideas rather than as transparent passive visual forms dependent on their accompanying texts Thus The Rise of the Image enriches our understanding of the role of prints in books on art

Architectural Space in Eighteenth-Century Europe Meredith Martin, 2017-07-05 Architectural Space in Eighteenth Century Europe Constructing Identities and Interiors explores how a diverse pan European group of eighteenth century patrons among them bankers bishops bluestockings and courtesans used architectural space and decor to shape and express identity Eighteenth century European architects understood the client's instrumental role in giving form and meaning to architectural space In a treatise published in 1745 the French architect Germain Boffrand determined that a visitor could judge the character of the master for whom the house was built by the way in which it is planned decorated and distributed This interdisciplinary volume addresses two key interests of contemporary historians working in a range of disciplines one the broad question of identity formation most notably as it relates to ideas of gender class and ethnicity and two the role played by different spatial environments in the production not merely the reflection of identity at defining historical and cultural moments By combining contemporary critical analysis with a historically specific approach the book's contributors situate ideas of space and the self within the visual and material remains of interiors in eighteenth century Europe In doing so they offer compelling new insight not only into this historical period but also into our own

Architecture in the Age of Printing Mario Carpo, 2017-02-10 A history of the influence of communication technologies on Western architectural theory The discipline of architecture depends on the transmission in space and time of accumulated experiences concepts rules and models From the invention of the alphabet to the development of ASCII code for electronic communication the process of recording and transmitting this body of knowledge has reflected the dominant information technologies of each period In this book Mario Carpo discusses the communications media used by Western architects from classical antiquity to modern classicism showing how each medium related to specific forms of architectural thinking Carpo highlights the significance of the invention of movable type and mechanically reproduced images He argues that Renaissance architectural theory particularly the system of the five

architectural orders was consciously developed in response to the formats and potential of the new printed media Carpo contrasts architecture in the age of printing with what preceded it Vitruvian theory and the manuscript format oral transmission in the Middle Ages and the fifteenth century transition from script to print He also suggests that the basic principles of typographic architecture thrived in the Western world as long as print remained our main information technology The shift from printed to digital representations he points out will again alter the course of architecture
