Seidman,2004-08 The events of 1968 have been seen as a decisive turning point in the Western world The author takes a critical look at May 1968 and questions whether the events were in fact as revolutionary as French and foreign commentators have indicated He concludes the student movement changed little that had not already been challenged and altered in the late fifties and early sixties The workers strikes led to fewer working hours and higher wages but these reforms reflected the secular demands of the French labor movement May 1968 was remarkable not because of the actual transformations it wrought but rather by virtue of the revolutionary power that much of the media and most scholars have attributed to it and which turned it into a symbol of a youthful renewed and freer society in France and beyond In Pursuit of the Quality of Life Avner Offer,1996 Is wealth the same as happiness How is the quality of life to be evaluated measured and most importantly achieved The authors provide provocative and engaging answers to these questions in this new multidisciplinary and pragmatic approach to an important area of social research Taking the individual as the point of departure the authors consider both objective circumstances and their subjective impact on people s lives Prominent authors from an array of different academic disciplines discuss the quality of life as viewed from their distinctive perspectives these include the psychology of subjective well being destitution and basic needs the environment women and the family illness and health employment and work and the role of the state *Science and Technology in a Developing World* T. society plays a dominant role in the social sciences The Great Divide between pre industrial and industrial societies is commonly assumed to be the main bridge separating modern societies from the past and distinguishing developed from undeveloped states in the present era In history economics politics and sociology the concept of industrial society underlies a wide variety of discussions particularly those relating to economic development and social progress Outside academic writing too the concept exerts a great deal of influence In the developing world there is a widespread concern to industrialise whilst in the developed world there is growing uneasiness as to whether industrialisation is beneficial or not but still the concept is central This book examines critically the concept of industrial society its pervasiveness and influence It reviews all the major theories of industrial society and the research into the changing character of post industrial societies It argues that the decision to use the concept severely restricts the social imagination and that the concept becomes increasingly less useful as criticism of the equating of industrialisation with social progress grows
