Machine In Me:

Machines Like Me Ian McEwan, 2019-04-23 From the Booker Prize winner and bestselling author of *Atonement* a sharply intelligent novel of ideas The New York Times that asks whether a machine can understand the human heart or whether we are the ones who lack understanding Set in an uncanny alternative 1982 London where Britain has lost the Falklands War Margaret Thatcher battles Tony Benn for power and Alan Turing achieves a breakthrough in artificial intelligence *Machines Like Me* powerfully portrays two lovers who will be tested beyond their understanding Charlie drifting through life and dodging full time employment is in love with Miranda a bright student who lives with a terrible secret When Charlie comes into money he buys Adam one of the first generation of synthetic humans With Miranda's assistance he codesigns Adam's personality The near perfect human that emerges is beautiful strong and smart and a love triangle soon forms Ian McEwan's subversive gripping novel poses fundamental questions What makes us human our outward deeds or our inner lives Could a machine understand the human heart This provocative and thrilling tale warns against the power to invent things beyond our control

The Machine in Me Gary Lee Downey, 2014-03-05 Gary Lee Downey investigates the body machine interface in his remarkable ethnography of computer engineers Drawing on interviews observations and personal interaction with engineers he documents the everyday power of technology's dominant image in our society a force widely regarded as monolithically progressive *The Machine in Me* will lead the reader to understand how deeply connected we are to *The Machine* and how beneficial it would be for us to really understand ourselves and machines as partially configured of the other we as part machine machines as part human In this way we can begin to see both the power and limitations of technology

The Machine Question David J. Gunkel, 2017-09-08 An investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making One of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration Much recent attention has been devoted to the animal question consideration of the moral status of nonhuman animals In this book David Gunkel takes up the machine question whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration The machine question poses a fundamental challenge to moral thinking questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents Gunkel begins by addressing the question of machine moral agency whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions He then approaches the machine question from the other side considering whether a machine might be a moral patient due legitimate moral consideration Finally Gunkel considers some recent

innovations in moral philosophy and critical theory that complicate the machine question deconstructing the binary agent patient opposition itself Technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions think of HAL in 2001 A Space Odyssey could become science fact Gunkel s argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world
